

Management's Discussion and Analysis

For the Nine Months Ended September 30, 2015

(Expressed in Canadian dollars, unless otherwise noted)

November 25, 2015

For further information on the Company, reference should be made to its public filings on SEDAR at www.sedar.com. Information is also available on the Company's website at www.alxuranium.com. This Management's Discussion and Analysis ("MD&A") should be read in conjunction with condensed interim consolidated financial statements for the nine months ended September 30, 2015, and the audited financial statements for the year ended December 31, 2014, and related notes thereto which have been prepared in accordance with International Financial Reporting Standards. The MD&A contains certain Forward Looking Statements which are provided on Page 31.

OVERVIEW

ALX Uranium Corp. ("ALX") (formerly Lakeland Resources Inc.) is a junior resource issuer, primarily engaged in the acquisition, exploration, and development of uranium properties within the Athabasca Basin in Saskatchewan, Canada. The Company's primary goal is to identify, evaluate and acquire uranium properties and to advance them by way of equity financing, joint ventures, option agreements or other means.

ALX was incorporated on October 11, 2007 under the Business Corporations Act of British Columbia under the name "Cats Eye Capital Corp." Originally listed as a Capital Pool Company ("CPC"), the Company completed its initial public offering and was listed on the TSX Venture Exchange (the "TSX-V") on May 6, 2008. The Company completed its Qualifying Transaction in August 2010 and changed its name to Lakeland Resources Inc. The Company resumed trading on the TSX-V as a Tier 2 Mining Issuer on August 19, 2010, under the symbol "LK". On September 24, 2015, the Company consolidated their outstanding shares on the basis of one post-consolidated share for every 3 pre-consolidated shares. All share values referenced in this MD&A are post-consolidation. In addition, the Company completed a Plan of Arrangement with Alpha Exploration Inc. ("Alpha") and acquired all of the common shares of Alpha (see "Transaction with Alpha Exploration Inc."). The Company is currently listed on the TSX-V under the symbol "AL", and is also listed in Germany on the Frankfurt Stock Exchange ("FSE") under the symbol "6LNN" and in the United States of America on the OTCQX under the symbol "ALXEF".

The Company's head office is located at 1450 – 789 West Pender St., Vancouver, BC, V6C 1H2.

OUTLOOK AND STRATEGY

- To build one of the strongest portfolios of uranium properties in the Athabasca Basin;
- To spend capital and exploration dollars wisely, to make new discoveries, and delineate new uranium resources;
- To work with committed and long-term partners and investors; and
- To build a focused, motivated, and hardworking team with diverse skills and backgrounds, and an overriding commitment to build shareholder value

HIGHLIGHTS

Year-to-date 2015

- On January 27, 2015, the Company announced the commencement of drilling at the Star/Gibbons Creek Uranium Properties.
- On February 6, 2015, the Company announced the sale of the Ballard Lake Gold Property to RT Minerals Corp., whereby RT Minerals can earn a 100% interest in the property by issuing 4,000,000 shares (received April 28, 2015).
- On February 20, 2015, the Company announced it had acquired additional mineral claims in the Athabasca Basin Region. The Black Birch Claims were acquired from 877384 Alberta Ltd. and Zimtu Capital Corp. The Athabasca Group of Properties was purchased from DG Resource Management Ltd.
- On February 20, 2015, the Company announced it had received TSX-V approval to extend the expiry dates of 3,138,432 share purchase warrants, priced at \$0.90, from March 20, 2015 to March 20, 2016.
- On March 12, 2015, the Company announced the completion of its Phase 1 drilling program at the Star/Gibbons Creek Property.
- On April 23, 2015, the Company announced the appointment of Jody Dahrouge, President of Dahrouge Geological Consulting Ltd., 877384 Alberta Ltd., and DG Resource Group Ltd. to the board of directors.
- On May 1, 2015, the Company announced results of its Phase 1 drilling program and reported uranium values at its Gibbons Creek / Star Properties.
- On May 28, 2015, the Company acquired additional claims along the Patterson Lake and Carter Lake corridors within the southwest part of the Athabasca Basin by staking and through a property purchase agreement with Eagle Plains Resources Limited.
- On July 3, 2015, the Company staked one additional claim north of the original five Kelic Lake claims within the southern part of the Athabasca Basin by staking.
- On September 15, 2015, at a special meeting, the shareholders of ALX approved a share consolidation, on the basis of one post-consolidated share for every three pre-consolidated shares. The consolidation was completed on September 24, 2015.
- On September 24, 2015, the Company completed a transaction whereby the Company acquired all of the outstanding share capital of Alpha.
- On September 29, 2015, the company announced that drilling had commenced at the Kelic Lake Property.

Subsequent to Q3 2015

- On October 27, 2015, the Company released an update on the Gibbons Creek Property, with plans to complete a radon survey later in the fall.
- On November 10, 2015, the Company announced the completion of the fall drilling program at Kelic Lake Property.
- On November 12, 2015, the Company announced the radon survey results at the Gibbons Creek Property and plans to complete a drilling program prior to the end of December.
- On November 19, 2015, the Company released an update on the Newnham Lake Property giving the data and results of the summer exploration program which consisted of a land-based radon flux survey and a ground gravity survey.

Fiscal Year 2014

- On January 8, 2014, the Company identified numerous drill targets on the Gibbons Creek Property. Along with the Company's joint venture partner, Declan Resources Inc., the Company announced its winter and spring exploration plans for a drill campaign.
- On March 20, 2014, the Company closed a private placement for total gross proceeds of \$2,800,000.
- On April 11, 2014, the Company acquired five new uranium projects in the Athabasca Basin, resulting in a total of 16 projects in the Company's portfolio. The newly acquired properties are referred to as Lazy Edward Bay, Karen Lake, Black Lake, Hidden Bay and Fedun Lake.

- On April 24, 2014, the Company entered into a purchase agreement to acquire 100% of three additional claims adjacent to its Lazy Edward Bay Uranium Property. The three isolated claims, collectively known as the Arbour Property, total 4,475 hectares (11,058 acres).
- On June 25, 2014, the Company announced that it entered into an option agreement to acquire a 100% interest in one claim located in the northern Athabasca Basin region, Saskatchewan.
- On July 21, 2014, the Company announced that it entered into a purchase agreement to acquire a 100% interest in the Newnham Lake Property. The property is contiguous to the south with the Company's Karen Lake Property.
- On July 21, 2014, the Company announced that it had entered into a purchase agreement to acquire a 100% interest in the Hatchet Lake Property. The property is located east of the Company's recently purchased Fond du Lac Property.
- On August 21, 2014, the Company entered into a purchase agreement with Kalt Industries Ltd. and DG Resource Management Ltd., for the acquisition of the 1333 Property, located near the Newnham Lake Property.
- On August 21, 2014, the Company announced that it had acquired additional claims through option agreements near its Newnham Lake Property, within the northeast portion of the Athabasca Basin. The option agreement includes acquisition of three mineral claims from Anstag Mining Inc.
- In August 2014, the Company acquired four uranium properties by staking in the Athabasca Basin region, Saskatchewan, totalling 17,954 hectares (44,365 acres). The Carter Lake Property is comprised of four mineral claims. The Cable Bay Property is comprised of five mineral claims. The Highrock Property is comprised of three mineral claims. The Wright River Property is comprised of eleven mineral claims.
- On September 29, 2014, the Company terminated its option agreement on the Gibbons Creek Property with Declan Resources Inc. and the Company now retains 100% control over the property.
- On October 28, 2014, the Company announced that the planning of a minimum 1,500 metre Phase 1 drilling program at the Gibbons Creek and Star Properties had been finalized. The Company obtained the necessary permits to carry out the work programs, a drilling contract was negotiated, and the company was adequately funded to complete the work. The drilling program would commence as soon as winter ground conditions permitted.
- On October 30, 2014, the Company provided further results from the summer 2014 exploration at its Lazy Edward Bay Property with the following highlights:
 - Liberty Trend – Surface rock samples with 537 and 896 ppm U_3O_8 ; strongly anomalous soil samples with maximum values of 14.8 ppm U, 2,920 ppm As, 119 ppm Co and 112 ppm Ni; and
 - Bay Trend - Soil and radon samples show strong anomalies above known conductors.
- On November 19, 2014, the Company announced the acquisition, by staking, of four new properties, totalling 17,954 hectares (44,365 acres), and the expansion of five other existing properties (Lazy Edward Bay, Riou Lake, Hawkrock Rapids, Small Lake and Fedun Lake).
- On December 30, 2014, the Company announced that it entered into an option agreement with Takara Resources Inc., whereby Takara can acquire a 50% interest in the Fond du Lac Property.

TRANSACTION WITH ALPHA EXPLORATION INC.

On September 25, 2015, the Company completed a Plan of Arrangement (the “Transaction”) with Alpha Exploration Inc. (“Alpha”) and acquired all of the common shares of Alpha. The Alpha shareholders received 0.50 of an ALX common share for each Alpha common share held, resulting in the Company issuing 15,868,875 common shares to Alpha shareholders, representing approximately 38% of ALX’s total post-transaction issued and outstanding share capital. All of the outstanding Alpha options were cancelled and all of the outstanding Alpha warrants were assumed by ALX and exercisable to acquire ALX common shares, with the number of ALX common shares and warrant price adjusted, as appropriate, to reflect the consideration received by the Alpha shareholders pursuant to the Transaction agreement.

The Company has recorded the purchase of assets of Alpha as follows:

Purchase Price consideration:

	\$
Value of 15,868,875 shares issued at \$0.15 per share	2,380,331
Fair value of Alpha warrants assumed by ALX	176,292
Transaction costs	94,043
Total	2,650,666
Assets acquired and liabilities assumed	
Cash	703,827
Marketable securities	88,970
Prepaid expenses	66,952
Amounts receivable	17,453
Reclamation bond	10,000
Property and equipment	37,359
Exploration and evaluation assets	2,582,015
Total Assets	3,506,576
Liabilities	
Accounts payable and accrued liabilities	14,965
Deferred income tax liability	840,945
Net Carrying Value	2,650,666

URANIUM – DEMAND OUTLOOK

Uranium demand is largely driven by energy demands. The current spot price of uranium is approximately US\$36.00/lb U₃O₈ (Source: UxC) and there are currently approximately 438 nuclear reactors in operation world-wide. Global electricity demand is expected to grow significantly through 2030 and the number of nuclear reactors is rising to meet it. A total of 65 new reactors are now under construction – new build levels not seen since the 1970s – as well as an additional 165 planned and 324 proposed to 2030 (Source: World Nuclear Association). The bulk of the new units are in five countries – China, India, Russia, South Korea and the USA. Several near term catalysts for the uranium market include (i) increased clarity on Japanese restarts; (ii) further supply destruction due to the low spot price environment; and (iii) increased buying and resumption of long-term contracting by utilities (Source: Raymond James).

The following is a list of selected countries with planned, proposed, or under construction nuclear plants as of November 1, 2015:

Country	Construction	Planned	Proposed	Total
China	22	43	136	201
India	6	22	35	63
Russia	9	31	18	58
USA	5	5	17	27
Saudi Arabia	0	0	16	16
Japan	3	9	3	15
UAE	4	0	10	14
Ukraine	0	2	11	13
United Kingdom	0	4	9	13
South Korea	4	8	0	12
Turkey	0	4	4	8
Others	12	38	65	115
Total	65	165	324	554

URANIUM – MARKET OUTLOOK

In the near term management believes there are significant potential catalysts for investors to take note of:

Restart of Japanese reactors

After the events of Fukushima, the Japanese government immediately put the brakes on their nuclear industry, the third largest in the world, shutting down its entire 54-reactor fleet and pausing to consider whether to abandon nuclear.

This had a two-fold effect on the uranium market as it took a significant amount of demand off the market and also created a newfound supply as plants had expanding inventories to destock. Recently, the Japanese have elected the relatively pro-nuclear Liberal Democratic Party.

Several utilities/reactors have recently applied for restarts. Since the Japanese fleet was mothballed, the cost to substitute fossil fuels (oil, LNG, coal, etc.) for the idled reactors has been estimated at more than US\$300M/day, or US\$100bn a year. In some Japanese industries, electricity bills have risen fivefold. Japanese utilities have posted net losses since the nuclear shut down, with some needing aid to cover importing fossil fuels.

Though still politically sensitive, in light of rising energy prices and greenhouse gas emissions and to keep its industries competitive on the global stage, the likelihood of continued Japanese restarts appears to be growing. With Japanese reactors back online, this will help to reverse the process that helped to bring uranium prices down; albeit timing for restarts is still in debate.

End of the Russian HEU agreement

The Russian HEU or “Megatons to Megawatts” agreement terminated on December 31, 2013. The agreement was a 20-year deal signed in 1993 to amongst other items downblend 400 t of highly-enriched uranium (HEU) from dismantled Russian warheads into 500 Mlbs of U₃O₈-equivalent for use in US reactors. In 2012, it was estimated that this deal contributed 24 Mlbs of U₃O₈, or 10-12% of the total global uranium supply.

While there has been a transitional period at the end of the agreement, this has cut off a significant supply source, particularly at current prices.

New production requires higher prices

With the global reactor build continuing unabated, more uranium will be needed moving forward. The current spot price does not provide enough incentive to bring many new projects, especially conventional projects, online.

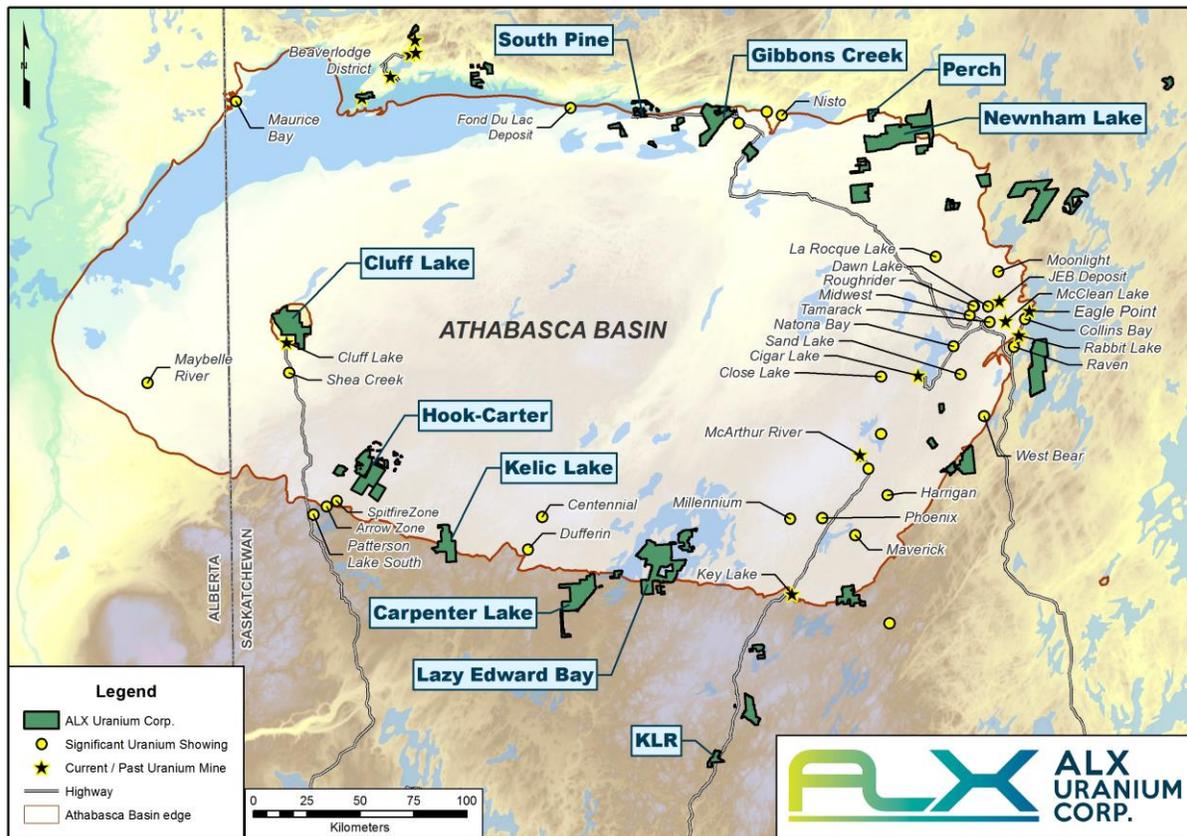

With the low uranium prices over the last couple of years, BHP, Cameco, AREVA and ARMZ all announced cancellations or delays of projects due to economics. A recent report by J.P. Morgan estimates that a price of over \$80/lb U₃O₈ is needed to incentivize new conventional projects. In order to bring new projects on stream to meet growing demand, prices need to rise.

According to the International Energy Agency, global demand for electricity is expected to be 84% higher in 2035 than in 2009, mainly driven by emerging markets. To fuel global demand, more reactors will be required as part of the energy mix.

ATHABASCA PROPERTIES

ALX Uranium Corp. has 300,000+ hectares (“Ha”) of exploration properties in the Athabasca Basin (See Figure 1)

Figure 1
Athabasca Basin Uranium Projects
Northern Saskatchewan

Gibbons Creek Property

In 2013, the Company acquired, by staking, five claims totalling 12,772 hectares (31,560 acres), known as the Gibbons Creek Property (“Gibbons Creek”).

The Gibbons Creek Property is located less than three kilometres from the community of Stony Rapids Saskatchewan. The property is adjacent to the Black Lake Project held jointly by UEX Corporation (“UEX”) and AREVA Resources Canada Inc. (“AREVA”). The property benefits from nearby infrastructure, with power lines and highways transecting the claims. The depth to the unconformity at Gibbons Creek is known to be shallow (i.e. ~50 to 250 metres) increasing the economics of exploration. The property also benefits from a significant database of historic exploration information from work completed by UEX Corporation as well as Eldorado Nuclear (one of the two predecessors to what is now Cameco Corporation).

On December 4, 2013, the Company signed a joint venture agreement with Declan Resources Inc. (“Declan”) whereby Declan could earn up to a 70% interest in the Gibbons Creek Property by incurring \$6,500,000 of staged exploration expenditures, paying \$1,500,000 in cash (\$100,000 received) and issuing 11,000,000 shares (2,000,000 issued with a fair value of \$240,000) in staged payments prior to December 31, 2017. On September 19, 2014, the Company terminated its option agreement with Declan and now retains 100% control over the property.

On November 27, 2013, the Company announced that it signed a Joint Venture Agreement (the "JV Agreement") with Star Minerals Group Ltd. ("Star Minerals") granting ALX an option to acquire a 100% interest in two claims located in the Athabasca Basin near the Gibbons Creek Property. Under the terms of the JV Agreement, ALX has the right to earn a 100% interest in the two claims by making cash payments totalling \$60,000 (paid) and issuing 600,000 common shares (issued) over a 12 month period. Star Minerals will retain the option of a 25% buyback for four times the exploration monies spent by the Company to the date that the buyback option is exercised. The buyback option will be exercisable at any time up to a 90 day period following the completion and publication of a N.I. 43-101 compliant resource estimate. The transaction was approved by the TSX-V on November 28, 2013. As of the current date the Company has satisfied the terms of the agreement and earned its interest in the property.

During the year ended December 31, 2014, ALX developed several drill targets at Gibbons Creek based on a fall 2013 exploration program that included a land-based radon survey carried out by RadonEx Ltd. (“RadonEx”) of St-Lazare, PQ, a boulder prospecting survey and a DC-Resistivity survey.

This exploration resulted in the discovery of highly significant radon values, the confirmation of high-grade boulders containing up to 4.28% U₃O₈ and the definition of an east-west resistivity low interpreted as an alteration corridor.

On March 12, 2015, the Company announced the completion of a Phase 1 drilling campaign consisting of 14 holes totalling 2,550 metres, at the Gibbons Creek/Star Property(s). In total, four drill holes encountered anomalous radioactivity near the sub-Athabasca unconformity.

On May 1, 2015, the Company reported drilling results from the Gibbons Creek/Star Property(s). Drill hole GC15-03 intersected 0.13% U₃O₈ over 0.23 metres, within a 1.1 metre interval of 333.8 ppm Uranium immediately below the sub-Athabasca unconformity. Uranium enrichment, strong hydrothermal alteration and pathfinder geochemistry (B, Co, Ni) were noted lower in hole GC15-03 between a depth of 106.8 m and 133.0 m. Drill hole GC15-06 encountered strongly altered basement lithologies including strongly hematized quartz-carbonate-chlorite alteration and brecciation. Highly anomalous geochemical pathfinders were noted throughout the hole, including a zone of uranium enrichment from approximately 41.0 to 109.5 m. Elevated boron values were returned from samples collected approximately six metres below the unconformity with up to 1,213 ppm B over a 3.9 m interval from 52.8 to 56.7 m within a wider zone of anomalous boron from 41.0 to 72.8 m. Highly anomalous nickel (up to 0.19%) and cobalt were also noted within this hole.

On November 12, 2015, the Company provided an exploration update on its Gibbons Creek Property. A gravity survey was completed on the property with the objective of providing coverage across the expanded radon anomaly (approximately 1,200 metres by 500 metres) at the Centre Zone. In addition, coverage was expanded to the south where a previous ground gravity survey was completed at the South Zone in the winter of 2015.

The gravity survey identified a saddle-like depression centered within a gravity high located directly beneath the central portions of the radon anomaly. Additional distinct and closed gravity lows were identified approximately 500 metres north of hole GC15-03 which intersected 0.13% U_3O_8 over 0.23 metres.

The exploration target at Centre Zone possesses the following attributes:

- A surface radon anomaly encompassing an area of approximately 1,200 metres by 500 metres;
- Peak radon values ranging between 4 and 10.77 pCi/m²/sec at 10 locations, which are amongst the highest recorded values in the Athabasca Basin;
- A coincident DC-resistivity low anomaly;
- A saddle-like depression (gravity low) located within the central part of the anomaly;
- Depth to the sub-Athabasca unconformity is estimated at only 40 to 70 metres; and
- Diamond drill hole GC15-06 located at the edge of the currently known radon anomaly, which encountered strongly altered basement lithologies and anomalous geochemical pathfinders within the sandstone and basement.

Results of the recent survey will aid in selecting drill hole locations for a diamond drilling program anticipated to be completed prior to the end of December.

Kelic Lake Property (acquired from Alpha)

In August 2014, Alpha entered into an option agreement with Jody Dahrouge and 877384 Alberta Ltd. (the "Optionors") to acquire a 100% interest in the Kelic Lake Property ("Kelic Lake"), located in the southern Athabasca Basin area.

Under the terms of the Kelic Lake option agreement, the Company may earn a 100% interest in Kelic Lake by:

- Making cash payments totalling \$80,000 (paid);
- Issuing a total of 500,000 common shares (375,000 issued);
- Completing a total of \$750,000 in exploration expenditures, all in stages by December 14, 2016. The Optionors will retain a 2.5% royalty on commercial production, which can be reduced at the option of the Company to a 1.0% royalty by payment of \$1,500,000 to the Optionors at any time prior to the commencement of production.

Kelic Lake was originally comprised of five optioned mineral claims, which cover approximately 8,604 hectares (21,261 acres) located along the inferred southern margin of the Athabasca Basin approximately 50 km east of Highway 955 and 130 km northeast of La Loche, Saskatchewan. An additional contiguous mineral claim totalling 1,452 hectares (3,589 acres) was staked north of the original five claims on July 3, 2015. The Kelic Lake property now comprises a contiguous block of six mineral claims totalling 10,056 hectares (24,850 acres).

On October 14, 2014, the Company announced that CGG Canada Services Ltd. ("CGG", formerly Fugro Geoservices Ltd.) had completed an airborne magnetic and radiometric survey over the Kelic Lake Property in October 2014. The survey included 1,200 line-km at 100 metre line spacing covering an approximate 10×10 km grid area. A final report from CGG on the airborne magnetic and radiometric survey results was received and has been filed for assessment with the Government of Saskatchewan.

CGG also performed a FALCON® airborne gradiometer gravity survey over the Kelic Lake grid, which included magnetic and laser scanning digital elevation components. The survey was completed February 3, 2015. A final report from CGG was received and has been filed for assessment with the Government of Saskatchewan. The airborne magnetic, radiometric and gravity results will be combined with an extensive compilation of geological, geochemical and geophysical data already in hand to refine and prioritize potential drill targets at Kelic Lake.

A radon and soil/stream sediment sampling program was carried out by RadonEx in early September 2015 over known, prospective conductors along the Mirror River in the central portion of the property. A total of 92 Ae horizon soil samples and 52 radon flux measurements were taken at amenable soil sample sites. In addition, 13 stream sediment samples were collected along the Mirror River. Radon gross flux values ranged from 0.09 to 0.64 pCi/m²/sec. Geochemical results from the survey are expected shortly.

On September 29, 2015, the Company announced the commencement of a diamond drilling program based on the integration of previous work as well as the airborne magnetic, radiometric and gravity work. The helicopter-assisted

drilling program in the central portion of the property was planned to consist of up to six holes totalling approximately 1,800 metres to test an airborne gravity low in the area of the termination of a major airborne VTEM (Versatile Time Domain Electromagnetic) conductor with coincident ground-based vertical loop EM and TEM conductors striking northeast-southwest. The target area is located approximately one kilometre east of a radioactive spring along a north trending magnetic gradient (contact) of regional extent.

On November 10, 2015, the Company announced the results of fall diamond drilling program at its Kelic Lake Property. A total of 1,924 metres of drilling were completed in six holes (KL15-001 to KL15-006) collared at five different set-ups. Drill holes were both vertical and inclined. Overburden thickness is approximately 80 metres. Depth to the basement unconformity ranged from 175 to 183 metres (i.e. the average thickness of Athabasca Group sandstone ranged from 95 to 103 metres). Overall, paleoweathering below the unconformity is well developed, up to 23 metres thick in select drill holes.

The drill holes tested airborne gravity and radiometric lows, an airborne VTEM conductor with coincident ground-based fixed loop and TEM conductors as well as a north trending magnetic gradient (contact) of regional extent. Targets were confirmed and show extensive bleaching, desilicification and faulting of the Athabasca Group sandstone, strong hematization of the sandstone just above the unconformity and the intersection of a wide graphitic metapelite in the basement rocks; all excellent indicators of the potential for a nearby uranium mineralizing system. Drilling under winter conditions is both necessary and warranted to follow up these results and completely test the target corridor both across and along the Mirror River oxbow plain.

Although no significant radioactivity was encountered in the drill holes, the integrated exploration target of a large gravity low overlapping northeast-trending conductors was confirmed. This 2015 grassroots drilling program has only begun to test the exploration potential of the Kelic Lake Property, which remains vastly underexplored. The property is considered highly prospective and warrants more extensive follow-up drilling both along and across the target corridor based on the numerous favourable attributes observed in drill core, including:

- Extensive and pervasive bleaching and desilicification of the Athabasca sandstone in all drill holes, from the base of overburden to the unconformity, likely due to faulting;
- Strong pervasive secondary hematization and local chloritization of the Athabasca sandstone just above the unconformity;
- Strong chlorite alteration below the unconformity, including vertical stockwork vein networks of dark green chlorite; and
- Sulfide-bearing graphitic metapelite target was confirmed, generally 50 to 60 metres thick, with locally pervasive secondary graphite.

Expenditures related to the fall drilling program are estimated at over \$1,000,000, which will satisfy the terms of the option agreement with the Optionors such that the Company will have earned its 100% interest in Kelic Lake.

Lazy Edward Bay Property Option

On April 24, 2014, the Company announced that it entered into a purchase agreement to acquire a 100% interest in three claims, formerly known as the Arbour Property, located adjacent to its previously staked Lazy Edward Bay Uranium Property in the southern Athabasca Basin area of northern Saskatchewan. Under the terms of the agreement, the Company has the right to earn a 100% interest in the claims by making a cash payment totalling \$5,000 (paid) and issuing 83,333 common shares (issued with a fair value of \$42,500). The transaction was approved by the TSX-V on April 28, 2014. As of the current date the Company has satisfied the terms of the agreement and earned its interest in the property.

South Pine/Perch Properties

On June 4, 2013, the Company signed an agreement with Basin Minerals Ltd. ("Basin") whereby the Company has the right to earn a 100% interest in the South Pine and Perch Lake Properties by making cash payments totalling \$70,000 (\$20,000 paid as at December 31, 2013, \$30,000 paid during the year ended December 31, 2014, and \$10,000 paid during the nine months ended September 30, 2015) and issuing 1,500,000 common shares (100,000 shares issued with a fair value of \$28,500 during the year ended December 31, 2013, 133,333 shares issued with a fair value of \$48,000 during the year ended December 31, 2014, and 133,333 shares issued with a fair value of \$14,000 during the nine

months ended September 30, 2015) over a 36 month period. Basin will retain a 2% Net Smelter Royalty (“NSR”) on the Properties, 1% of which can be purchased by the Company for \$1,000,000. Basin will also be entitled to annual advanced royalty payments of \$10,000 which will commence after the Company has earned its interest. The transaction was accepted by the TSX-V on June 11, 2013.

Newnham Lake Property

On July 21, 2014, the Company announced that it entered into a purchase agreement to acquire a 100% interest in the Newnham Lake Property. The property is contiguous to the south of the Company’s Karen Lake Property. Under the terms of the agreement, the Company has the right to earn a 100% interest in the property by making cash payments totalling \$100,000 (\$37,500 paid) and issuing 833,333 common shares (issued July 22, 2014 with a fair value of \$275,000). The transaction was approved by the TSX-V on July 22, 2014.

On August 21, 2014, the Company entered into a purchase agreement with Kalt Industries Ltd. and DG Resource Management Ltd., for the acquisition of the 1333 Property, located near the Company’s Newnham Lake Property, for total consideration of up to \$50,000 cash (paid) and the issuance of up to 750,000 common shares (166,667 shares issued August 28, 2014 with a fair value of \$50,000 and 83,333 shares issued on August 28, 2015 with a fair value of \$7,500) of the Company. The Company commits to expend not less than \$1,000,000 in exploration expenditures on or before August 28, 2019, of which \$50,000 must be spent in year one. The property is subject to a 3% gross overriding royalty (“GORR”), to which ALX may purchase up to a 1% for \$1,000,000 up to August 28, 2019. The transaction was approved by the TSX-V on August 28, 2014.

On August 21, 2014, the Company entered into an option agreement to acquire three mineral claims from Anstag Mining Inc., for total consideration of up to \$50,000 cash (\$40,000 paid) and 333,333 common shares (166,667 shares issued August 28, 2014 with a fair value of \$50,000 and 166,666 shares issued August 28, 2015 with a fair value of \$15,000). In addition, the Company commits to incur \$1,500,000 in exploration expenditures on or before five years from the Exchange approval date. The property is subject to a 1% GORR, to which ALX may purchase 1/2% of the GORR for \$1,000,000 at any time. The transaction was approved by the TSX-V on August 28, 2014.

The Newnham Lake Property now covers an area of approximately 24,500 hectares (60,540 acres).

On November 19, 2015, the Company provided an exploration update on data and results received from the summer exploration program at its Newnham Lake Property. During August 2015, RadonEx Ltd. completed a land-based radon flux survey and Dahrouge Geological Consulting Ltd. completed a ground gravity survey. A total of 454 radon stations, and 418 gravity stations were measured on the DEB grid.

Highlights include:

- A quasi-linear radon anomaly encompassing approximately 100 metres by 750 metres was identified at the DEB grid;
- Nine radon values ranging from 2.81 to 4.00 pCi/m²/sec were identified;
- The anomaly is associated with a north-south trending fault which crosscuts the known conductor; and
- A coincident gravity low was identified.

The trend of anomalous radon-in-soil samples (greater than 2.8 pCi/m²/sec) occurs at the intersection of a cross-cutting structure with a conductive trend defined by a ground based Horizontal Loop Electromagnetic (HLEM) survey carried out in 2006. The cross-cutting structure is also evident in the ground-gravity survey and historic magnetic data.

The radon anomaly is located less than one kilometre northeast of historic uranium intersections in drill holes BL-146 and BL-172 with uranium values in the basement of up to 0.27% U₃O₈ over 0.13 metres and 0.09% U₃O₈ over 0.50 metres, respectively.

Integration of current and historic data is ongoing, including the prioritization of targets for drilling, which is planned in 2016, subject to financing.

Carpenter Lake Property (acquired from Alpha):

In November 2014, Alpha acquired a 60% interest in the Carpenter Lake Property (“Carpenter Lake”). As a result, a joint venture was formed between Alpha (60%) and Noka (40%) for the further development of Carpenter Lake, with Alpha as operator of the joint venture.

Carpenter Lake is situated along the Cable Bay Shear Zone (“CBSZ”) and straddles the south central margin of the Athabasca Basin in northern Saskatchewan. It comprises a total of 20,637 hectares (50,995 acres) within five contiguous mineral dispositions. Carpenter Lake has prospective exploration attributes that warrant further evaluation.

A FALCON® airborne gradiometer gravity survey was carried out by CGG over Carpenter Lake. The survey was completed in the last week of February 2015 and included approximately 340 line-km flown at 100 metre line spacing covering a grid area of approximately 10 x 4 km. A final report from CGG on the airborne gravity survey results was received and has been filed for assessment with the Government of Saskatchewan. The results will be integrated into the Company’s geophysical database to better define drill targets at Carpenter Lake.

In July 2015, Condor Consulting, Inc. of Lakewood, Colorado carried out Maxwell modeling of a section of the VTEM conductor related to the conductive system associated with the CBSZ on the Carpenter Lake Property. In addition, 3D modeling of the magnetics and FALCON® airborne CGG gravity was completed on this area of the property.

Carter Lake/Hook Lake Properties

On May 27, 2015, the Company entered into an option agreement to acquire twenty eight mineral claims from Eagle Plains Resources Limited (“EPL”), totalling 5,095.31 hectares (12,591 acres), for total consideration of \$40,000 cash (paid) and 266,667 common shares (issued with a fair value of \$28,000 during the nine months ending September 30, 2015). The Company acquired, by staking, ten mineral claims, totalling 1,260.18 hectares (3,114 acres), which when added to the original four claims that were staked, bring the total number of claims at the Carter Lake Property to thirty eight. All thirty eight claims are subject to a 2% NSR payable to EPL. The Company may, at any time, purchase 1% of the NSR for \$1,000,000. The transaction was approved by the TSX-V on June 8, 2015.

The Hook Lake Property (“Hook Lake”), acquired from Alpha, is 100% owned by the Company, subject to certain royalties, and is located in the southwestern part of the Athabasca Basin in northern Saskatchewan. Hook Lake is approximately 15 km northeast of Fission Uranium Corp.’s Triple R uranium deposit in the Patterson Lake South area, and about 55 km south-southeast of AREVA/UEX’s Shea Creek uranium deposits. The property consists of three mineral dispositions totalling 13,210 hectares (32,643 acres).

In September 2014, Alpha engaged CGG to perform a FALCON® airborne gradiometer gravity survey over Hook Lake, including magnetic and laser scanning digital elevation components. The survey included 987 line-km flown at 200 metre line spacing covering roughly a 10 x 14 km grid area. The survey was completed on December 28, 2014 and a final report from CGG on the airborne gravity survey results was received and has been filed for assessment with the Government of Saskatchewan. The results will be integrated into the Company’s geophysical database to better define drill targets at Hook Lake.

Cluff Lake Properties

Middle Lake Property, Saskatchewan

The Middle Lake Property (“Middle Lake”) is owned 80% by the Company and 20% by Acme Resources Inc. It is adjacent to the former Cluff Lake uranium mine area in the western part of the Athabasca Basin in northern Saskatchewan. Middle Lake is located approximately 75 km north of the Triple R uranium deposit in the Patterson Lake South area and about 250 km north along Highway 955 from the town of La Loche. The property comprises one mineral disposition totalling 2,416 hectares (5,970 acres).

On September 17, 2014, the Company filed a technical report on SEDAR entitled “Technical Report on the Middle Lake Property, Carswell Structure, Northwest Saskatchewan, Canada” prepared by Dr. Charlie T. Harper, PhD, P.Eng, P.Geo., of Harper Geological Consulting & Exploration. The report summarized drilling carried out in February and

March of 2014. Dr. Harper is an active field geologist with an extensive work history in the Athabasca Basin, and his recommendations included:

- Expansion of existing radon and gravity surveys during 2015 winter season;
- Follow-up diamond drilling in early 2015 based on integration of the radon and gravity work, targeting the potential up-ice source of high-grade boulder fans on and southwest of Middle Lake and west of Skull Lake.

On January 22, 2015, the Company announced the commencement of a winter 2015 exploration program at Middle Lake. The exploration program included infill and extension ground gravity and radon surveys as well as a diamond drilling program.

Infill and extension ground gravity survey work was completed by MWH Geo-Surveys Ltd. of Vernon, BC, at the beginning of the program. A radon survey was also performed by RadonEx Ltd. to augment data collected in 2014.

On March 10, 2015, the Company released the results of the winter 2015 diamond drilling program. The drilling consisted of 1,850 metres in 17 holes and was performed utilizing one drill rig by Team Drilling LP of Saskatoon, SK. The program commenced on February 8, 2015 and was completed on March 3, 2015.

Drilling in 2015 was focused on geophysical features in the northern part of the property, around and west of Skull Lake; integrated targets based on gravity, electromagnetic and magnetic features were tested. An expansive historic radon anomaly and scattered high-grade uraniferous boulders are located immediately to the south and west of the area tested.

Although no significant radioactivity was intersected during the drilling program, geophysical targets were corroborated by drilling. Conductors intersected west and north of Skull Lake are related to sulfide-bearing graphitic shear zones in psammitic gneiss with pegmatite in contact with Archean Earl River gneiss complexes. Farther to the west, a large gravity low anomaly was explained by the presence of abundant Cluff Lake impact breccia containing local graphitic shear zones.

While graphite and sulfides intersected along target shear zones were encouraging, anomalous radioactivity and evidence of hydrothermal alteration related to mineralizing processes were lacking. Further exploration will be evaluated once all drill data including geochemistry from systematic core sampling are in-hand and synthesized along with all existing regional and property-scale exploration data.

Gorilla Lake Property (formerly Cluff Lake (Logan) Project)

The Gorilla Lake Property comprises two mineral dispositions totalling approximately 7,552 hectares (18,661 acres) and is held 80% by the Company and 20% by Logan Resources Ltd. (“Logan”). The Company shall produce a bankable feasibility study with Logan having a carried interest until the feasibility study is delivered, at which time Logan will have the choice to take on a 20% participating interest in a new company to operate the production facility or take on a 2% GORR for all uranium mineral products and a 2% NSR for all other metals. The Company will return all of its interest in any of the claims to Logan upon a decision by the Company to terminate work thereon.

Bridle Lake Property (formerly Cluff Lake (Rio Tinto) Project)

The Bridle Lake Property (“Bridle Lake”) is owned 50% by the Company and 50% by Rio Tinto Canada Uranium Corporation. Bridle Lake is located north of and adjacent to the former Cluff Lake uranium mine area in the western portion of the Athabasca Basin in northern Saskatchewan. The property comprises two mineral dispositions totalling approximately 6,797 hectares (16,795 acres).

Key Lake Road Properties

During the nine months ended September 30, 2015, the Company acquired, by staking, the Key Lake Claims in the Athabasca Basin region of northern Saskatchewan. The Key Lake Road Properties is comprised of 15 mineral claims totalling 8,569 hectares (21,174 acres).

Other Uranium Properties

Fond du Lac Property Option

On June 25, 2014, the Company announced that it entered into an option agreement to acquire a 100% interest in one claim located in the northern Athabasca Basin region of northern Saskatchewan. Under the terms of the agreement, the Company has the right to earn a 100% interest in the claims by issuing 66,667 common shares (issued with a fair value of \$24,000). The transaction was approved by the TSX-V on June 27, 2014. As of the current date the Company has satisfied the terms of the agreement and earned its interest in the property.

On December 29, 2014, the Company announced it had entered into an option agreement with Takara Resources Inc. (“Takara”) where Takara can acquire a 50% interest in the Fond du Lac Property by issuing 1,750,000 common shares (1,500,000 shares issued with a fair value of \$15,000) and spending \$100,000 on exploration of the property by June 1, 2015. The property is subject to a 1.5% NSR to the original vendor. The transaction was approved by the TSX-V on December 31, 2014.

Hatchet Lake Property

On July 21, 2014, the Company announced that it entered into a purchase agreement to acquire a 100% interest in the Hatchet Lake Property. The property is located east of the Company’s recently purchased Fond du Lac Property. Under the terms of the agreement, the Company has the right to earn a 100% interest in the property by making a cash payment totalling \$13,500 (paid) and issuing 166,667 common shares (issued July 22, 2014 with a fair value of \$55,000). The transaction was approved by the TSX-V on July 22, 2014. As of the current date the Company has satisfied the terms of the agreement and earned its interest in the property.

Black Birch Claims

On January 28, 2015, and amended on March 12, 2015, the Company entered into an agreement with 877384 Alberta Ltd. and Zimtu Capital Corp. (“Zimtu”), whereby the Company can acquire a 100% interest in the Black Birch Claims located in the Athabasca Basin region of northern Saskatchewan. Under the terms of the agreement, total consideration of \$17,636 cash (\$8,818 paid during the nine months ended September 30, 2015 and \$8,818 paid subsequent to September 30, 2015) and 58,780 common shares (29,390 common shares issued with a fair value of \$4,850 as of September 30, 2015 and 29,390 common shares issued with a fair value of \$2,645 subsequent to September 30, 2015) of the Company will be split between the vendors. The agreement was approved by the TSX-V on March 17, 2015.

Athabasca Group of Properties

On January 28, 2015, the Company entered into an agreement with DG Resource Management Ltd., whereby the Company can acquire a 100% interest in a certain group of mineral claims known as the Athabasca Group of Properties, located in the Athabasca Basin region of northern Saskatchewan. Under the terms of the agreement, total consideration of \$40,880 cash (\$20,440 paid during the nine months ended September 30, 2015 and \$20,440 paid subsequent to September 30, 2015) and 373,333 common shares (186,667 common shares issued with a fair value of \$30,800 during the nine months ended September 30, 2015 and 186,666 common shares issued with a fair value of \$11,200 subsequent to September 30, 2015) of the Company will be paid. The agreement was approved by the TSX-V on March 10, 2015. The property is subject to a 2% NSR, with ALX having the right to purchase 1% any time for \$2,000,000.

Riou Lake/Otherside Properties:

On April 2, 2013, the Company announced that it had acquired, by staking, two uranium projects located in the Athabasca Basin region of northern Saskatchewan. The Riou Lake Property is comprised of eleven mineral claims. The Otherside Property is comprised of two mineral claims.

Staked Properties:

On April 11, 2013, the Company announced that it had acquired five uranium properties, by staking, in the Athabasca Basin region of northern Saskatchewan. The Lazy Edward Bay Property is comprised of ten mineral claims. The

Karen Lake Property is comprised of three mineral claims. The Black Lake Property is comprised of two mineral claims. The Hidden Lake Property is comprised of three mineral claims. The Fedun Lake Property is comprised of two mineral claims.

On April 25, 2013, the Company announced that it had acquired three uranium properties, by staking, in the northern and northeastern part of the Athabasca Basin in northern Saskatchewan. The Small Lake Property is comprised of six mineral claims. The Hawkrock Rapids Property is comprised of three mineral claims. The Circle Lake Property is comprised of two mineral claims.

On June 5, 2013, the Company announced that it had acquired two uranium properties, the Richmond Lake Property and Jasper Lake Property, by staking, both located within the eastern margin of the Athabasca Basin in northern Saskatchewan.

In August 2014, the Company acquired four uranium properties, by staking, in the Athabasca Basin region of northern Saskatchewan, totalling 17,954 hectares (44,365 acres). The Carter Lake Property is comprised of four mineral claims. The Cable Bay Property is comprised of five mineral claims. The Highrock Property is comprised of three mineral claims. The Wright River Property is comprised of eleven mineral claims.

During the nine months ended September 30, 2015, the Company acquired the following claims, by staking:

- i. the North Pine Claims in the Athabasca Basin region, Saskatchewan, which includes 14 mineral claims, totalling 1,779 hectares (4,396 acres);
- ii. additional Lazy Edward Claims in the Athabasca Basin region, Saskatchewan, which includes 26 mineral claims, totalling 32,087 hectares (72,289 acres);
- iii. the Gunnar Claims in the Athabasca Basin region, Saskatchewan, which includes 3 mineral claims, totalling 1,655 hectares (4,090 acres); and
- iv. one additional mineral claim totalling 1,452 hectares (3,589 acres) north of the original five claims on the Kelic Lake Property.

OTHER PROJECTS

Midas Gold Property

On December 22, 2010, the Company entered into an option to purchase a 100% interest in and to the Midas Gold Property (“Midas”) located in Ontario, Canada. The Company paid the vendors total cash consideration of \$95,000 and issued 450,000 common shares. The Company incurred a total of \$125,000 in exploration expenditures on the property in the first twelve months following TSX-V acceptance of the agreement. The Vendors will retain a 2% NSR on the Property; 1% of which can be purchased by the Company for \$1,000,000. As of the current date the Company has satisfied the terms of the agreement and earned its interest in the property.

On September 3, 2013, the Company entered into an option agreement with New Dimension Resources Ltd. (“New Dimension”) whereby the Company granted New Dimension the option to acquire a 70% interest in the Midas Gold Property by spending \$1,200,000 in exploration (including a firm commitment of \$300,000 no later than December 31, 2013), issuing 1,500,000 shares (300,000 received on October 15, 2013) and paying \$100,000 on or before December 31, 2016. The property is subject to a 2% NSR to the underlying optionors, a portion of which can be purchased.

On October 19, 2015, the Company and New Dimension amended the terms of the agreement as follows:

- An optional cumulative expenditure of \$700,000 on or before December 31, 2017 and \$1,200,000 on or before December 31, 2018,
- Issue the Company 100,000 post consolidation shares of New Dimension on or before December 31, 2015 and 100,000 post consolidation shares on or before December 31, 2016, and
- Pay the Company \$100,000 on or before December 31, 2017.

Exploration Program at Midas Gold Property

On February 6, 2014, ALX's joint-venture partner New Dimension announced the results of an eleven (11) hole, 1,488 metre diamond drilling program completed on the Midas in 2013.

The drilling program confirmed and further defined gold mineralization that was previously identified in a 2011 drilling program carried out by Lakeland Resources Inc. Mineralization is hosted within quartz stockwork veining developed along east-west trending strongly pyritized shear zones. Thin section work on core samples as well as detailed structural interpretations are ongoing with the aim of better understanding gold distribution and deposit geology to aid in exploration planning.

Highlights of the 2013 diamond drilling program at the Midas Gold Property are provided in the table below:

Drill Hole	Zone	Dip	From (metres)	To (metres)	Drill Intercept (metres)	Gold (g/t)
MC-13-17	GZ1	-50°	43.30	45.50	2.20	0.402
			46.50	47.00	0.50	1.870
			61.00	61.50	0.50	0.317
MC-13-18	GZ1	-70°	37.20	38.00	0.80	1.145
			38.90	39.80	0.90	0.786
MC-13-19	GZ1	-50°	16.80	17.80	1.00	1.084
			47.30	48.80	1.50	7.598
<i>including</i>			47.80	48.30	0.50	15.391
<i>and</i>			48.30	48.80	0.50	6.241
MC-13-20	GZ1	-70°	No significant results			
MC-13-21	GZ1	-70°	25.70	27.70	2.00	1.598
			32.40	33.00	0.60	1.487
			39.00	41.00	2.00	0.478
MC-13-22	GZ2	-45°	56.70	57.70	1.00	0.330
			63.45	64.45	1.00	0.880
			178.00	179.00	1.00	0.782
MC-13-23	GZ2	-45°	44.10	45.10	1.00	0.422
			45.75	46.25	0.50	0.679
			49.15	50.10	0.95	1.213
			77.40	78.00	0.60	0.748
MC-13-24	GZ2	-65°	49.40	50.60	1.20	1.987

- *Highlights from 2013 diamond drilling program for results over 0.3 g/t gold;*

- *Minimum individual assay interval used is 0.5 metres, maximum individual assay interval used is 1.0 metres;*
- *All results shown are over core lengths. True widths are not known.*

New Dimension is currently accessing the results of the diamond drilling program and compiling the results of mapping and channel sampling. Further exploration work will be contingent on the overall conclusion of the ongoing study.

Camlaren Gold Property

On August 12, 2010, the Company completed the acquisition of the Camlaren Gold Property, located in the Northwest Territories, from Pasinex Resources Limited (“Pasinex”), a CNSX listed company. Pursuant to the terms of the Acquisition Agreement, the Company acquired a 100% interest in and to the Camlaren Gold Property in consideration for the issuance of 1,000,000 common shares (issued). The common shares are being held in escrow with an initial 10% released on August 19, 2010 and the remaining shares being released in 15% increments every 6 months. The acquisition of the Camlaren Property constituted as the Company’s Qualifying Transaction, as that term is defined in the TSX-V policies.

The Camlaren Gold Property consists of two mineral claims covering approximately 981 hectares (2,425 acres), located 80 km northeast of Yellowknife.

Ballard Lake Gold Property

On February 27, 2012, the Company entered into an option to purchase a 100% interest in and to the Ballard Lake Gold Property, located in Ontario, Canada.

The Company will pay the vendors cash considerations as follows:

- i) \$5,000 on signing of the agreement (paid);
- ii) \$10,000 on May 23, 2013 (paid); and
- iii) \$15,000 on May 23, 2014 (see below).

The Company will issue common shares to the vendors as follows:

- i) 33,333 common shares on TSX-V acceptance of the agreement (issued);
- ii) 33,333 common shares on May 23, 2013 (issued); and
- iii) 33,333 common shares on May 23, 2014 (issued).

The Vendors will retain a 2% NSR on the property; 1% of which can be purchased by the Company for \$1,000,000.

On July 8, 2014, the Company received approval to amend the Ballard Lake Gold Property Acquisition Agreement dated March 25, 2012 between the Company and Mike and Mathieu Tremblay (the “Vendors”) whereby in lieu of the final payment of \$15,000, the Company will issue 33,333 common shares (issued). On July 8, 2014, the Company issued 66,667 common shares (issued with a fair value of \$24,000) to complete the required payments on the Ballard Lake Gold Property. As of the current date the Company has satisfied the terms of the agreement and earned its interest in the property.

On February 6, 2015, the Company entered into an option agreement with RT Minerals Corp. (“RT Minerals”) whereby the Company has granted RT Minerals the option to acquire a 100% interest in the Ballard Lake Gold Property by issuing 4,000,000 common shares (received and fair valued at \$60,000 during the nine months ended September 30, 2015) to the Company. The agreement was accepted by the TSX-V on April 28, 2015.

Kamichisitit Copper Claims

In June 2012, the Company acquired, by staking, two claims located in Kamichisitit Township, situated approximately 40 kilometres north of Iron Bridge, Ontario, Canada. In June 2014, the Company staked additional claims in the surrounding area.

Donna Property (acquired from Alpha)

The Donna Property (“Donna”) is located in the Monashee Mountains in south-central British Columbia, approximately 60 km east of Vernon. Donna is a contiguous block of seven mineral claims covering 2,299 hectares (5,680 acres). On September 8, 2013, Alpha entered into an agreement to grant Interconnect Ventures Corporation (“Interconnect”) an option to acquire a 70% interest in the Donna Property. On October 30, 2015, the option agreement with Interconnect was cancelled.

The main exploration target is a bulk tonnage gold-silver deposit hosted by a vein stockwork localized along a major north-south fault structure, and spatially related to the contact of a large diorite stock which intrudes metamorphic sedimentary rocks. Gold enrichment in soils extends for more than 1,600 metres (5,300 feet) along the height of land between the Kettle River and Yeoward Creek, which both have historical placer gold production.

On January 27, 2015, the Company announced the results of a diamond drilling program on the Donna Property completed in 2014. Work included a four-hole NQ diamond drilling program carried out by Discovery Consultants and Dorado Drilling Ltd. on behalf of the Company and Interconnect for a total of 492 metres. Drilling was based on targets generated from an induced polarization (“IP”) survey carried out on the property in 2014.

All four drill holes intersected gold mineralization, including 8.72 g/t Au over 2.0 metres. Gold mineralization is associated with semi-massive sulphides including pyrite, arsenopyrite, galena and pyrrhotite which occur along the contact between a diorite intrusion and argillite. This newly discovered gold mineralization is 1.5 km west of the area of historic trenching and drilling, and 350 metres west of the 2010 drilling. This expanded delineation of gold increases significantly the potential of the zone.

Mikwam Property (acquired from Alpha)

The Mikwam Property (“Mikwam”) is located in east-central Ontario, approximately 160 km northeast of Timmins. Mikwam is a contiguous block of nine mineral claims covering 944 hectares (2,333 acres) that are 100% owned by the Company. The property lies along the western extension of the Casa Berardi Deformation Zone that extends from the Quebec-Ontario border into Noseworthy and Bradette Townships and is located approximately 30 km west of Hecla Mining Company’s Casa Berardi Gold Mine.

A 2006 diamond drilling program was carried out on Mikwam by ESO Uranium Corp. consisting of 17 holes totalling 6,383 metres. The program was successful in intersecting several high grade gold mineralized zones.

Highlights of the 2006 drilling include:

- Hole ESO-06-02 4.10 g/t Au over 19.0 metres;
- Hole ESO-06-03 4.80 g/t Au over 16.0 metres;
- Hole ESO-06-07 6.32 g/t Au over 5.6 metres;
- Hole ESO-06-14 3.65 g/t Au over 16.0 metres;
- Hole ESO-06-15 4.37 g/t Au over 18.0 metres; and
- Hole ESO-06-17 4.99 g/t Au over 13.0 metres

Gold mineralization on the Mikwam Property is associated with quartz-carbonate veins, but the highest gold values occur in highly sulphidized zones, consisting of 5 to 50% pyrite and 1 to 5% arsenopyrite within a highly sericitized, quartz-flooded matrix.

The Company is evaluating a formal, third party review of the numerous geophysical surveys completed over the Mikwam Property in the next 12 months, which include VTEM, tri-sensor magnetic and XDS VLF-EM airborne. This study would better define the stratigraphy of the host rocks, fold axes and fault planes on the property, and better constrain potential future drill targets.

Qualified Persons

The disclosure of technical information regarding ALX’s properties in this MD&A has been reviewed and approved by Sierd Eriks, P.Geo., ALX’s Vice-President of Exploration and Dr. Michael H. Gunning, Ph.D., P.Geo, ALX’s

Executive Chairman, both Qualified Persons as defined by *National Instrument 43-101 – Standards of Disclosure for Mineral Projects* and are non-independent of ALX.

FINANCIAL SUMMARY

Overall Performance

At September 30, 2015, the Company had \$2,539,100 (December 31, 2014 – \$3,754,652) in cash and cash equivalents and working capital of \$1,237,897 (December 31, 2014 - \$3,305,219). The Company incurred a net loss of \$817,693 during the nine months ended September 30, 2015 (December 31, 2014 - \$1,244,859 net loss). The Company has total assets of \$10,202,923 (December 31, 2014 - \$6,784,331), including cash and cash equivalents of \$2,539,100 (December 31, 2014 - \$3,754,652), taxes receivable of \$47,870 (December 31, 2014 - \$24,157), other receivables of \$9,500 (December 31, 2014 - \$3,275), marketable securities of \$149,142 (December 31, 2014 - \$28,500), prepaid expenses of \$103,385 (December 31, 2014 - \$74,377), property and equipment of \$37,226 (December 31, 2014 - \$nil), exploration and evaluation assets of \$4,029,190 (December 31, 2014 - \$2,899,370), and reclamation bond of \$10,000 (December 31, 2014 - \$nil). The Company has accounts payable and accrued liabilities of \$589,894 (December 31, 2014 - \$111,915), liability for flow through shares of \$180,261 (December 31, 2014 - \$467,827), and a deferred tax liability of \$840,945 (December 31, 2014 - \$nil).

Selected Annual Financial Information

The following table provides a summary of the Company’s financial operations for the last three fiscal years ended December 31. For more detailed information, refer to the Company’s annual audited financial statements.

	Year ended December 31, 2014	Year ended December 31, 2013	Year ended December 31, 2012
Total revenues	-	-	-
General and administrative expenses	1,180,094	803,898	217,910
Loss for the period	(1,244,859)	(753,299)	(145,284)
Loss per share	(0.03)	(0.03)	(0.01)
Total assets	6,784,331	2,187,975	1,558,503
Total liabilities	579,742	145,173	48,475
Working Capital	3,305,219	34,957	411,254
Weighted Avg. number of shares outstanding	16,453,497	8,374,634	6,879,863

The Company’s general and administrative expenses have increased substantially over the past three fiscal years due to the Company’s increased business activities from the acquisition and exploration of uranium properties. The Company’s assets have also increased substantially over this time, and have been funded by the issuance of shares.

Results of Operations

Nine Months Ended September 30, 2015

The Company had a net loss of \$817,693 during the nine months ended September 30, 2015, compared to a net loss of \$1,048,119 during the nine months ended September 30, 2014, for a difference of \$230,426. Details of the significant changes over last year’s period are as follows:

- An increase in accounting and audit fees to \$23,300 (2014 - \$18,419) for the increased cost of auditing due to the increase in business transactions in the prior year,
- A decrease in advertising and promotion expenses to \$78,097 (2014 - \$152,196) and investor relations to \$35,000 (2014 - \$64,145) due to decreased promotion of the Company during the period of drilling,
- A decrease in consulting fees and salaries to \$175,313 (2014 - \$216,230) due to a decrease in outside

consulting services provided to management of the Company,

- A decrease in legal fees to \$9,435 (2014 - \$36,859) for work on the Company's acquisitions in the prior year's period,
- A decrease in property investigation costs to \$nil (2014 - \$27,643) as the Company focused on its current properties rather than investigating new properties,
- An increase in share-based payments to \$548,154 (2014 - \$229,090) from stock options granted,
- An increase in travel expenses to \$32,324 (2014 - \$20,352) for increased travel to tradeshow and to the Company's properties,
- An increase in interest income to \$7,272 (2014 - \$2,203) due to increased investments held during the current year's period,
- A decrease in the unrealized loss on marketable securities to \$22,518 (2014 - \$163,000) due to the increase in value of the Company's marketable securities, and
- An increase deferred income tax recovery to \$287,566 (2014 - \$39,200) due to the tax benefit of issuing flow-through shares.

Selected Quarterly Information

The following is a summary of the results from the eight previously completed financial quarters:

	September 30, 2015	June 30, 2015	March 31, 2015	December 31, 2014	September 30, 2014	June 30, 2014	March 31, 2014	December 31, 2013
Corporate overhead	154,846	174,594	212,018	253,845	160,474	304,177	232,508	221,232
Share-based payments	548,154	-	-	-	149,527	10,937	68,626	110,763
Deferred income tax recovery	60,872	36,048	190,646	58,087	29,476	9,724	-	6,751
Income (Loss) for the period	(678,152)	(151,552)	12,011	(196,740)	(350,056)	(375,156)	(322,907)	(326,255)
Total assets	10,202,923	6,516,113	6,931,798	6,784,331	4,956,799	4,602,616	4,864,520	2,187,975
Total liabilities	1,611,100	373,415	679,548	579,742	348,860	248,148	296,802	145,173
Working Capital	1,237,897	2,113,508	2,482,040	3,305,219	1,920,252	2,455,778	2,853,545	34,957

Over the last eight quarters, the Company has seen its corporate overhead expenses remain fairly consistent, with the exception of Q2 2014 through Q4 2014, which saw a significant increase in advertising and consulting fees due to the acquisition of properties and increased exploration of the Company's properties. The net income (loss) for the Company is significantly affected by share-based payments from the granting of options and deferred income tax recovery from the renunciation of flow through expenses.

Three Months Ended September 30, 2015

The Company had a net loss of \$678,152 during the three months ended September 30, 2015, compared to a net loss of \$350,056 during the three months ended September 30, 2014, for a difference of \$328,096. Details of the significant changes over last year's period are as follows:

- A decrease in advertising and promotion expenses to \$19,391 (2014 - \$29,843) and investor relations to \$7,500 (2014 - \$10,000) due to decreased promotion of the Company during the period of drilling,
- A decrease in consulting fees and salaries to \$52,011 (2014 - \$58,179) due to a decrease in outside consulting services provided to management of the Company,
- A decrease in legal fees to a recovery of \$278 (2014 - \$5,830 expense) for work on the Company's acquisitions in the prior year's period,

- An increase in share-based payments to \$548,154 (2014 - \$149,527) from the granting of stock options,
- An increase in transfer agent and filing fees to \$23,628 (2014 - \$12,953) for costs associated with the Alpha transaction,
- A decrease in the unrealized loss on marketable securities to \$38,839 (2014 - \$71,500) due to the increase in value of the Company's marketable securities, and
- An increase deferred income tax recovery to \$60,872 (2014 - \$29,476) due to the tax benefit of issuing flow-through shares.

Liquidity and Solvency

The Company has total assets of \$10,202,923 (December 31, 2014 - \$6,784,331). The primary assets of the Company are cash and cash equivalents of \$2,539,100 (December 31, 2014 - \$3,754,652), taxes receivable of \$47,870 (December 31, 2014 - \$24,157), other receivables of \$9,500 (December 31, 2014 - \$3,275), marketable securities of \$149,142 (December 31, 2014 - \$28,500), prepaid expenses of \$103,385 (December 31, 2014 - \$74,377), property and equipment of \$37,226 (December 31, 2014 - \$nil), exploration and evaluation assets of \$4,029,190 (December 31, 2014 - \$2,899,370), and reclamation bond of \$10,000 (December 31, 2014 - \$nil). The Company has no long-term liabilities and has working capital of \$1,237,897 (December 31, 2014 - \$3,305,219).

Cash outflow from operating activities during the nine months ended September 30, 2015 was \$495,434 (September 30, 2014 - \$757,616). This was primarily attributable to corporate overhead, including administration fees, advertising, consulting, and property investigation.

During the nine months ended September 30, 2015, the net cash flows from financing activities were \$nil compared to \$3,051,066 during the nine months ended September 30, 2014. The amount is significantly higher in the previous year's period due to proceeds from the issuance of both flow-through and non-flow through shares.

During the nine months ended September 30, 2015, the Company's exploration and evaluation expenditures were \$1,335,512, compared to \$428,785 during the nine months ended September 30, 2014 as the Company had the financing in place to increase exploration on its new properties. During the nine months ended September 30, 2015, the Company received \$nil (September 30, 2014 - \$100,000) from Declan towards earning its interest in the Gibbons Creek Property, received \$5,610 (September 30, 2014 - \$nil) from the sale of marketable securities, received \$703,827 (September 30, 2014 - \$nil) from the acquisition of Alpha, and paid \$94,043 (September 30, 2014 - \$nil) in transaction costs to acquire Alpha.

The Company's ability to continue as a going concern is dependent on the Company's ability to raise funds. The Company believes its current treasury is sufficient to fund the planned exploration and corporate expenses through 2015.

SHAREHOLDERS' EQUITY

The Company is authorized to issue an unlimited number of common shares.

On September 25, 2015, the Company consolidated their outstanding shares on the basis of one post-consolidated share for every three pre-consolidated share. All share values referenced in these consolidated financial statements are post-consolidation.

	Number Outstanding November 25, 2015	Number Outstanding September 30, 2015	Number Outstanding December 31, 2014
Common Shares issued and outstanding	41,443,462	41,443,462	18,004,561
Options to purchase Common Shares	3,908,331	3,908,331	1,640,000
Warrants to purchase Common shares	13,360,797	13,360,797	7,992,424
Total	58,712,590	58,712,590	27,636,985

i) Common shares issued

On September 25, 2015, the Company issued 15,868,875 common shares to the shareholders of Alpha (see Note 3) at a deemed price of \$0.15 per share.

ii) Shares issued for properties

On March 24, 2015, the Company issued 29,392 common shares at a price of \$0.165 per share in accordance with the acquisition agreement on the Black Birch Property Agreement.

On March 24, 2015, the Company issued 186,667 common shares at a price of \$0.165 per share in accordance with the acquisition agreement on the Athabasca Group of Properties Agreement.

On June 8, 2015, the Company issued 266,667 common shares at a price of \$0.105 per share in accordance with the acquisition agreement on the Carter Lake Property Agreement.

On June 11, 2015, the Company issued 133,333 common shares at a price of \$0.105 per share in accordance with the acquisition agreement on the South Pine Property Agreement.

On August 28, 2015, the Company issued 83,333 common shares at a price of \$0.09 per share in accordance with the acquisition agreement on the 1333 Property.

On August 28, 2015, the Company issued 166,667 common shares at a price of \$0.09 per share in accordance with the acquisition agreement on the Anstag Property.

On September 25, 2015, the Company issued 15,868,875 common shares to the shareholders of Alpha at a fair value of \$0.15 per share.

iii) Stock option granted

On September 25, 2015, the Company issued 3,725,000 incentive stock options exercisable at \$0.10 per share and expiring on September 25, 2025 of which 2,700,000 options have been issued to directors and officers of the Company.

REGULATORY DISCLOSURES

Financial Risk Management

The Company is exposed in varying degrees to a variety of financial instrument-related risks. The Board of Directors approves and monitors the risk management processes, inclusive of documented investment policies, counterparty limits, and controlling and reporting structures. The type of risk exposure and the way in which such exposure is managed is provided as follows:

(a) Credit risk

Credit risk is the risk of loss associated with a counter party's inability to fulfill its payment obligations. The Company's credit risk is primarily attributable to its cash balances. The Company manages its credit risk on bank deposits by holding deposits in high credit quality banking institutions in Canada. Management believes that the credit risk with respect to receivables is remote.

(b) Liquidity risk

Liquidity risk is the risk that the Company will not be able to meet its financial obligations as they fall due. The Company has a planning and budgeting process in place to help determine the funds required to support the Company's normal operating requirements on an ongoing basis. The Company ensures that there are sufficient funds to meet its short-term business requirements, taking into account its anticipated cash flows from operations and its holdings of cash and cash equivalents.

Historically, the Company's sole source of funding has been the issuance of equity securities for cash, primarily through private placements. The Company's access to financing is always uncertain. There can be no assurance of continued access to significant equity funding.

(c) Foreign exchange risk

The Company is not exposed to foreign currency risk on fluctuations considering that its assets and liabilities are stated in Canadian dollars.

(d) Interest rate risk

Interest rate risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in market interest rates. With respect to financial assets, the Company's practice is to invest cash in cash equivalents in order to maintain liquidity. Fluctuations in interest rates affect the fair value of cash equivalents.

(e) Capital management

The Company's policy is to maintain a strong capital base so as to maintain investor and creditor confidence and to sustain future development of the business. The capital structure of the Company consists of equity, net of cash and cash equivalents.

There were no changes in the Company's approach to capital management during the nine months ended September 30, 2015 or the year ended December 31, 2014. The Company is not subject to any externally imposed capital requirements.

(f) Fair value

The fair value of the Company's financial assets and liabilities approximates the carrying amount.

Financial instruments measured at fair value are classified into one of three levels in the fair value hierarchy according to the relative reliability of the inputs used to estimate the fair values. The three levels of the fair value hierarchy are:

- Level 1 – Unadjusted quoted prices in active markets for identical assets or liabilities;
- Level 2 – Inputs other than quoted prices that are observable for the asset or liability either directly or indirectly; and
- Level 3 – Inputs that are not based on observable market data.

The following is an analysis of the Company's financial assets measured at fair value as at September 30, 2015 and December 31, 2014:

	As at September 30, 2015		
	Level 1	Level 2	Level 3
Cash	\$ 2,539,100	\$ -	\$ -
Marketable securities	\$ 149,142	\$ -	\$ -
Reclamation bond	\$ 10,000	\$ -	\$ -
	\$ 2,698,242	\$ -	\$ -
As at December 31, 2014			
	Level 1	Level 2	Level 3
Cash	\$ 3,754,652	\$ -	\$ -
Marketable securities	\$ 28,500	\$ -	\$ -
	\$ 3,783,152	\$ -	\$ -

Marketable Securities

	September 30, 2015		December 31, 2014	
	Cost	Fair Market Value	Cost	Fair Market Value
	\$	\$	\$	\$
New Dimension Resources	7,500	2,357	7,500	1,500
Declan Resources	27,000	1,125	27,000	4,500
Takara Resources	15,000	22,500	15,000	22,500
RT Minerals	60,000	40,000	-	-
Canyon Copper	140	140	-	-

Interconnect Ventures	7,000	7,000	-	-
Total	192,660	149,142	49,500	28,500

On October 15, 2013, the Company received 300,000 common shares of New Dimension Resources Ltd. pursuant to the option to acquire a 70% interest in the Midas Gold Property (see note 3). The 300,000 common shares were valued at \$0.025 per share, the closing price of the shares on October 15, 2013. On February 20, 2015, the shares were consolidated 1:7. The market value of the remaining 42,857 common shares is measured using the closing market price of \$0.055 as at September 30, 2015.

On January 8, 2014, the Company received 2,000,000 common shares of Declan Resources Inc. pursuant to the option to acquire a 70% interest in the Gibbons Creek Property (see note 3). The 2,000,000 common shares were valued at \$0.12 per share, the closing price of the shares on January 8, 2014. During the year ended December 31, 2014, 1,775,000 shares of Declan were sold for proceeds of \$51,355. The market value of the remaining 225,000 common shares is measured using the closing market price of \$0.005 as at September 30, 2015.

On December 30, 2014, the Company received 1,500,000 common shares of Takara Resources Inc. pursuant to the option to acquire a 50% interest in the Fond du Lac Property (see note 3). The 1,500,000 common shares were valued at \$0.01 per share, the closing price of the shares on December 30, 2014. The market value of 1,500,000 common shares is measured using the closing market price of \$0.015 as at September 30, 2015.

On April 28, 2015, the Company received 4,000,000 common shares of RT Minerals Corp. pursuant to the option to acquire a 100% interest in the Ballard Lake Property (see note 3). The 4,000,000 common shares were valued at \$0.015 per share, the closing price of the shares on April 28, 2015. The market value of 4,000,000 common shares is measured using the closing market price of \$0.01 as at September 30, 2015.

On September 24, 2015, in connection with the acquisition of assets from Alpha, the Company acquired 7,022 shares of Canyon Copper Corp. (“Canyon”) at a cost of \$0.02 per share, 543,000 shares of Uravan Minerals Inc. (“Uravan”) at a cost of \$0.14 per share, and 100,000 shares of Interconnect Ventures Corp. at a cost of \$0.07 per share.

Related Party Transactions

The Company incurred the following fees and expenses in the normal course of operations during the nine months ended September 30, 2015 and 2014.

Key Management Compensation		Nine Months ended September 30,	
		2015	2014
		\$	\$

*Owned by Jody Dahrouge, Director

**Former CFO

Related party amounts are unsecured, non-interest bearing and due on demand. As at September 30, 2015, \$111,142 (December 31, 2014 - \$24,677) is due to related parties of the Company and is included in accounts payable and accrued liabilities. See also Commitments.

Commitments

On December 1, 2014, the Company entered into a management services agreement with Zimtu Capital Corp. for the provision of administrative and managerial services to the Company at a rate of \$12,500 per month plus applicable taxes commencing December 1, 2014 for a term of 12 months.

The Company assumed a lease agreement, previously held by Alpha, for a term expiring April 1, 2017, whereby it was required to pay base rent of \$83,349 per annum. Effective June 1, 2015, the lease agreement was amended, whereby the expiry date was extended to December 31, 2018 and the Company is required to pay base rent of \$37,170 per annum. The Company's minimum payments over the next five fiscal years are as follows:

	\$
2015	9,293
2016	37,170
2017	37,170
2018	37,170
2019	6,195
	126,998

Subsequent Events

- a) On January 28, 2015, the Company entered into an agreement with 877384 Alberta Ltd. and Zimtu Capital Corp. to acquire a 100% interest in and to the Brassy Rapid Claims. Under the terms of the agreement, total consideration of \$3,750 cash and 37,500 common shares of the Company will be paid on the TSX Approval date and on the six month anniversary of the Approval date to each of the vendors. The property is subject to a 2% NSR, with the Company having the right to purchase 1% any time for \$2,000,000 for each claim. This agreement is subject to TSX-V approval. The Company has decided not to pursue this acquisition.
- b) Subsequent to September 30, 2015, the Company paid \$8,818 and issued 29,390 common shares with a fair value of \$2,645 in accordance with the Black Birch Property agreement.
- c) Subsequent to September 30, 2015, the Company paid \$20,440 and issued 186,666 common shares with a fair value of \$11,200 in accordance with the Athabasca Group of Properties agreement.

- d) On October 19, 2015, the Company and New Dimension amended the terms of the option agreement of the Midas Gold Property. See Note 4 (xiii).
- e) On October 30, 2015, the Donna Property option agreement with Interconnect was cancelled.

Accounting estimates

The preparation of financial statements in accordance with IFRS requires management to make estimates and assumptions about future events that affect the amounts reported in the financial statements and related notes to the financial statements. Estimates and assumptions are continuously evaluated and are based on management's experience and other factors, including expectations of future events that are believed to be reasonable under the circumstances. Actual results may differ from those estimates. Significant areas where management's judgment is applied are the recognition and impairment of exploration and evaluation assets, share-based payments charges, and deferred income taxes. Actual results may differ from those estimates

Risk and uncertainties

The operations of the Company are speculative due to the nature of its business which is the investment in the exploration and development of mining properties. These risk factors could materially affect the Company's future operating results and could cause actual events to differ materially from those described in forward-looking statements relating to the Company.

The list of risk factors below should not be taken as exhaustive of the risks faced by the Company or by investors in the Company. The above factors, and others not specifically referred to above, may in the future materially affect the financial performance of the Company and the value of its securities.

No History of Revenue

The Company's only source of income to date has been interest income earned on excess cash. There is no guarantee that the Company will enter into profitable agreements with mining companies and earn revenue from operations.

The Company is in the business of exploring for, with the ultimate goal of developing and producing, minerals from the uranium properties in the Athabasca Basin and other properties in which the Company may in the future acquire an interest. The Company has not commenced commercial production and the Company has no history or earnings or cash flow from its operations. As a result of the foregoing, there can be no assurance that the Company will be able to develop any of its properties profitably or that its activities will generate positive cash flow. The Company has not paid any dividends and it is unlikely to enjoy earnings or pay dividends in the immediate or foreseeable future. The Company has limited cash and other assets. A prospective investor in the Company must be prepared to rely solely upon the ability, expertise, judgment, discretion, integrity and good faith of the Company's management in all aspects of the development and implementation of the Company's business activities.

Market Price of the Common Shares

The Common Shares are listed and posted for trading on the TSX-V, the FSE, and the OTCQX Markets. The Company's business is in an early stage of exploration and an investment in the Company's securities is highly speculative. There can be no assurance that an active trading market in the Company's securities will be established and maintained. Securities of companies involved in the resource industry have experienced substantial volatility in the past, often based on factors unrelated to the financial performance or prospects of the companies involved. The price of the Common Shares is also likely to be significantly affected by short-term changes in commodity prices or in the Company's financial condition or results of operations as reflected in its quarterly earnings reports.

Acquisition Strategy

As part of the Company's business strategy, it has sought and will continue to seek new exploration, mining and development opportunities in the resource industry. In pursuit of such opportunities, the Company may fail to select appropriate acquisition candidates or negotiate acceptable arrangements, including arrangements to finance acquisitions or integrate the acquired businesses and their personnel into the Company. The Company cannot assure

that it can complete any acquisition or business arrangement that it pursues, or is pursuing, on favorable terms, or that any acquisitions or business arrangements completed will ultimately benefit the Company.

The Company may not realize the benefits of its growth projects

As part of its strategy, the Company will continue existing efforts and initiate new efforts to develop new mineral projects. A number of risks and uncertainties are associated with the development of these types of projects, including political, regulatory, design, construction, labour, operating, technical, and technological risks, uncertainties relating to capital and other costs, and financing risks. The failure to develop one or more of these initiatives successfully could have an adverse effect on the Company's financial position and results of operations.

Current Global Financial Conditions

Recent events in global financial markets, including sovereign debt crises, have had a profound impact on the global economy and global financial conditions have been subject to volatility. Many industries, including the mining sector, are impacted by these market conditions. Some of the key impacts of the current financial market turmoil include contraction in credit markets resulting in a widening of credit risk, devaluations and high volatility in global equity, commodity, foreign exchange and precious metal markets and a lack of market liquidity. A continuing slowdown in financial markets or other economic conditions, including, but not limited to, consumer spending, employment rates, business conditions, inflation, fuel and energy costs, consumer debt levels, lack of available credit, the state of the financial markets, interest rates, and tax rates may adversely affect the Company's business, financial condition, results of operations and ability to grow.

Financing Risk

The Company is limited in financial resources and has no assurance that additional funding will be available for further exploration and development of its projects or to fulfill its obligations under any applicable agreements. There can be no assurance that the Company will be able to obtain adequate financing in the future or that the terms of such financing will be favorable. Failure to obtain such additional financing could result in delay or infinite postponement of further exploration and development of its projects with the possible loss of such properties.

Competition

The mineral exploration and development industry is highly competitive. The Company competes with other domestic and international mineral exploration companies that have greater financial, human and technical resources. The Company's competitors may be able to respond more quickly to new laws or regulations or emerging technologies, or devote greater resources to the expansion or efficiency of their operations than the Company can. In addition, current and potential competitors may make strategic acquisitions or establish cooperative relationships among themselves or with third parties. Accordingly, it is possible that new competitors or alliances among current and new competitors may emerge and gain significant market share to the Company's detriment. The Company may also encounter increasing competition from other mining companies in the Company's efforts to hire experienced mining professionals. Increased competition could adversely affect the Company's ability to attract necessary capital funding, to acquire it on acceptable terms, or to acquire suitable properties or prospects for mineral exploration in the future. As a result of this competition, the Company may not be able to compete successfully against current and future competitors, and any failure to do so could have a material adverse effect on the Company's business, financial condition, results of operations and prospects.

In addition, there is no assurance that a ready market will exist for the sale of commercial quantities of ore. Factors beyond the control of the Company may affect the marketability of any substances discovered. These factors include market fluctuations, the proximity and capacity of natural resource markets and processing equipment, government regulations, including regulations relating to prices, taxes, royalties, land tenure, land use, importing and exporting of minerals and environmental protection. The exact effect of these factors cannot be accurately predicted, but the combination of these factors may result in the Company not receiving an adequate return on invested capital or losing its investment capital.

Risks related to International Activities

A material portion of the business of the Company may become located outside of North America. The Company's international operations may be adversely affected by political or economic developments or social instability, which will not be within the Company's control, including, among other things, the risks of political unrest, labour disputes and unrest, war, terrorism, abduction, expropriation, nationalization, renegotiation or nullification of existing concessions, contracts and permits, government regulation, delays in obtaining or renewing or the inability to obtain or renew necessary permits, taxation policies, economic sanctions, fluctuating exchange rates, currency controls, high rates of inflation, limitations on foreign ownership and increased financing costs. The occurrence of any such events could have a material adverse effect on the Company's business and results of operations as currently contemplated.

It may also be difficult for the Company to find and hire qualified people in the mining industry who are situated in outside of North America or to obtain all of the necessary services or expertise outside of North America or to conduct operations on the Company's projects at reasonable rates. If qualified people and services or expertise cannot be obtained outside of North America, the Company may need to seek and obtain those services from people located outside of these areas, which will require work permits and compliance with applicable laws and could result in delays and higher costs to conduct the Company's operations.

Corruption and Bribery Risk

The Company's operations are governed by, and involve interactions with, many levels of government. Like most companies, the Company is required to comply with anti-corruption and anti-bribery laws, including the Canadian *Corruption of Foreign Public Officials Act*. In recent years, there has been a general increase in both the frequency of enforcement and severity of penalties under such laws, resulting in greater scrutiny and punishment to companies convicted of violating anti-bribery laws. Furthermore, a company may be found liable for violations by not only its employees, but also by its third party agents. Although the Company takes steps to mitigate such risks, such measures are not always effective in ensuring that the Company, its employees or third party agents will comply strictly with such laws. If the Company finds itself subject to an enforcement action or is found to be in violation of such laws, this may result in significant penalties, fines and/or sanctions imposed on the Company resulting in a material adverse effect on the Company's reputation and results of operations.

Risks Associated with Joint Venture Agreements

Pursuant to agreements the Company may enter into in the course of its business, the Company's interest in its properties may become subject to the risks normally associated with the conduct of joint ventures. In the event that any of the Company's properties become subject to a joint venture, the existence or occurrence of one or more of the following circumstances and events could have a material adverse impact on the Company's profitability or the viability of its interests held through joint ventures, which could have a material adverse impact on the Company's business prospects, results of operations and financial condition: (i) disagreements with joint venture partners on how to conduct exploration; (ii) inability of joint venture partners to meet their obligations to the joint venture or third parties; and (iii) disputes or litigation between joint venture partners regarding budgets, development activities, reporting requirements and other joint venture matters.

Reliance on Key Individuals

The Company's success depends on its ability to attract and retain the services of key personnel who are qualified and experienced. In particular, the success of the Company is, and will continue to be to a significant extent, dependent on the expertise and experience of the Company's directors and senior management. It is expected that these individuals will be a significant factor in the Company's growth and success. The loss of the service of these individuals could have a material adverse effect on the Company.

The resource industry is largely driven by fluctuations in commodity prices which, when high, can lead to a large number of projects being developed which in turn increases the demand for skilled personnel, contractors, material and supplies. Accordingly, there is a risk to the Company of losing or being unable to secure enough suitable key personnel or key resources and, as a result, being exposed to increased capital and operating costs and delays, which may in turn adversely affect the development of the Company's projects, the results of operations and the Company's financial condition and prospectus.

Commodity Prices

The price of the Common Shares and the Company's financial results may be significantly adversely affected by a decline in the price of metals. The price of metal commodities fluctuates widely, especially in recent years, and is affected by numerous factors beyond the Company's control such as the sale or purchase of commodities by various central banks and financial institutions, interest rates, exchange rates, inflation or deflation, fluctuation in the value of the United States dollar and foreign currencies, global and regional supply and demand, and the political and economic conditions of major metal-producing countries throughout the world.

Dividend Policy

No dividends on the Common Shares have been paid by the Company to date. The Company anticipates that it will retain all earnings and other cash resources for the foreseeable future for the operation and development of its business. The Company does not intend to declare or pay any cash dividends in the foreseeable future. Payment of any future dividends will be at the discretion of the Company's board of directors after taking into account many factors, including the Company's operating results, financial condition and current and anticipated cash needs.

Conflicts of Interest

Certain of the directors and officers of the Company also serve as directors and/or officers of other companies involved in natural resource exploration, development and mining operations and consequently there exists the possibility for such directors and officers to be in a position of conflict. Any decision made by any of such directors and officers will be made in accordance with their duties and obligations to deal fairly and in good faith with a view to the best interests of the Company and its shareholders. In addition, each of the directors is required to declare and refrain from voting on any matter in which such directors may have a conflict of interest in accordance with the procedures set forth in the *Business Corporations Act* (British Columbia) and other applicable laws.

Exploration, Development and Operating Risks

Mining operations generally involve a high degree of risk. Any potential mining operations of the Company will be subject to all the hazards and risks normally encountered in the exploration, development and production of metals, including unusual and unexpected geologic formations, seismic activity, rock bursts, cave-ins, flooding, fire, environmental hazards and the discharge of toxic chemicals, explosions and other conditions involved in the drilling and removal of material, any of which could result in damage to, or destruction of mines and other producing facilities, damage to property, injury or loss of life, environmental damage, work stoppages, delays in production, increased production costs and possible legal liability. Milling operations are subject to hazards such as equipment failure or failure of retaining dams around tailings disposal areas which may result in environmental pollution and consequent liability. Although the Company believes that appropriate precautions to minimize risks are taken, these risks cannot be eliminated.

The exploration for and development of mineral deposits involves significant risks which even a combination of careful evaluation, experience and knowledge may not eliminate. While the discovery of an ore body may result in substantial rewards, few properties which are explored are ultimately developed into producing mines. Major expenses may be required to locate and establish mineral reserves, to develop metallurgical processes and to construct mining and processing facilities at a particular site. It is impossible to ensure that the exploration or development programs planned or other mining operations in which the Company may acquire an interest will result in a profitable commercial mining operation. Whether a mineral deposit will be commercially viable depends on a number of factors, including among other things: the interpretation of geological data obtained from drill holes and other sampling techniques, the particular attributes of the deposit, such as size, grade and proximity to infrastructure and labour; metal prices which are highly cyclical; government regulations, including regulations relating to prices, taxes, royalties, land tenure, land use, importing and exporting of minerals and environmental protection; and political stability. The Company's development projects are also subject to the issuance of necessary permits and other governmental approvals and receipt of adequate financing. The exact effect of these factors cannot be accurately predicted, but the combination of these factors may adversely affect the Company's business.

Exploration Costs

The estimates of costs to conduct further exploration work by the Company are based on certain assumptions with respect to the method and timing of exploration. By their nature, these estimates and assumptions are subject to significant uncertainties and, accordingly, the actual costs may materially differ from these estimates and assumptions. Accordingly, no assurance can be given that the cost estimates and the underlying assumptions will be realized in practice, which may materially and adversely affect the Company's viability.

Environmental Regulation, Risks and Hazards

All phases of mining operations are subject to environmental regulation in the jurisdictions in which they operate. These regulations mandate, among other things, the maintenance of air and water quality standards and land reclamation. They also set forth limitations on the generation, transportation, storage and disposal of solid and hazardous waste. Environmental legislation is evolving in a manner which will require stricter standards and enforcement, increased fines and penalties for non-compliance, more stringent environmental assessments of proposed projects and a heightened degree of responsibility for companies and their officers, directors and employees. Compliance with changing environmental laws and regulations may require significant capital outlays, including obtaining additional permits, and may cause material changes or delays in, or the cancellation of, the Company's exploration programs or current operations. There is no assurance that future changes in environmental regulation, if any, will not adversely affect the Company's mining operations.

Furthermore, environmental hazards may exist on the properties on which the owners or operators of mining operations hold interests which are unknown to such owners or operators at present and which have been caused by previous or existing owners or operators of the properties.

Government approvals and permits are currently, and may in the future be, required in connection with mining operations at the properties. To the extent such approvals are required and not obtained, mining operations may be curtailed or prohibited from continuing operations or from proceeding with planned exploration or development of mineral properties.

Failure to comply with applicable laws, regulations and permitting requirements may result in enforcement actions thereunder, including orders issued by regulatory or judicial authorities causing operations to cease or be curtailed, and may include corrective measures requiring capital expenditures, installation of additional equipment or remedial actions. Parties engaged in mining operations or in the exploration or development of mineral properties may be required to compensate those suffering loss or damage by reason of the mining activities and may have civil or criminal fines or penalties imposed for violations of applicable laws or regulations. The occurrence of any environmental violation or enforcement action may have an adverse impact on the Company's operations and reputation.

Amendments to current laws, regulations and permits governing operations and activities of mining and exploration companies, or more stringent implementation thereof, could have a material adverse impact on mining operations and cause increases in exploration expenses, capital expenditures or production costs or reduction in levels of production at producing properties or require abandonment or delays in development of new mining properties.

Governmental Regulation

Mining operations and exploration activities are subject to extensive laws and regulations governing exploration, development, production, exports, taxes, labour standards, waste disposal, protection and remediation of the environment, reclamation, historic and cultural resources preservation, mine safety and occupation health, handling, storage and transportation of hazardous substances and other matters. The costs of discovering, evaluating, planning, designing, developing, constructing, operating, and other facilities in compliance with such laws and regulations are significant. It is possible that the costs and delays associated with compliance with such laws and regulations could become such that the owners or operators of mining operations would not proceed with the development of or continue to operate a mine. As part of their normal course operating, and development activities, such owners or operators have expended significant resources, both financial and managerial, to comply with governmental and environmental regulations and permitting requirements, and will continue to do so in the future. Moreover, it is possible that future regulatory developments, such as increasingly strict environmental protection laws, regulations and enforcement policies thereunder, and claims for damages to property and persons resulting from mining operations could result in

substantial costs and liabilities in the future.

Permitting

Mining operations are subject to receiving and maintaining permits from appropriate governmental authorities. It can be time-consuming and costly to obtain, maintain and renew permits. In addition, permit terms and conditions can impose restrictions on how the Company conducts its operations and limit the Company's flexibility in development its mineral properties. Prior to any development on the Company's properties, permits from appropriate governmental authorities may be required. Permits required for the Company's operations may not be issued, maintained or renewed in a timely fashion or at all, may not be issued or renewed upon conditions that restrict the Company's ability to conduct the Company's operations economically, or may be subsequently revoke. Any such failure to obtain, maintain or renew permits, or other permitting delays or conditions could have a material adverse effect on the Company's business, results of operations, financial condition and prospectus.

Failure to comply with applicable laws, regulations and permitting requirements may result in enforcement actions thereunder, including orders issued by regulatory or judicial authorities causing operations to cease or be curtailed, and may include corrective measures requiring capital expenditures, installation of additional equipment or remedial actions. Parties engaged in mining operations may be required to compensate those suffering loss or damage by reason of the mining activities and may be liable for civil or criminal fines or penalties imposed for violations of applicable laws or regulations.

Infrastructure

Mining, processing, development and exploration activities depend, to one degree or another, on adequate infrastructure. Reliable roads, bridges, power sources and water supply are important determinants, which affect capital and operating costs. Unusual or infrequent weather phenomena, sabotage, government or other interference in the maintenance or provision of such infrastructure could adversely affect operations at the Company's properties.

Exploration and Geological Report

The reported results in the technical reports filed in respect of the Company's properties are estimates only. No assurance can be given that the estimated mineralization will be recovered. The reported results are based on limited sampling, and, consequently, are uncertain because the samples may not be representative. Estimates may require revision (either up or down) based on actual production experience. If the Company encounters mineralization or geological formations different from those predicted by past drilling, sampling and interpretations, any estimates may need to be altered in a way that could adversely affect the Company's operations or proposed operations. In addition, market fluctuations in the price of metals, as well as increased production costs or reduced recovery rates, may render certain minerals uneconomic.

Land Title

No assurances can be given that there are no title defects affecting the Company's properties. The Company's properties may be subject to prior unregistered liens, agreements, transfers or claims, including native land claims, and title may be affected by, among other things, undetected defects.

Commodity Price Fluctuations

The price of metals has fluctuated widely in recent years, and future serious price declines could cause continued development of and commercial production from the Company's properties to be impracticable. Future cash flows may not be sufficient and the Company could be forced to discontinue production and may be forced to sell the properties. Future production by the Company is dependent on metal prices that are adequate to make this property economic.

In addition to adversely affecting the commercial production estimates and financial conditions, declining commodity prices can impact operations by requiring a reassessment of the feasibility of a particular project. Such a reassessment may be the result of a management decision or may be required under financing arrangements related to a particular project. Even if the project is ultimately determined to be economically viable, the need to conduct such a reassessment

may cause substantial delays or may interrupt operations until the reassessment can be completed.

Additional Capital

Mining, processing, development and exploration may require substantial additional financing. Failure to obtain sufficient financing may result in delaying or indefinite postponement of exploration, development or production or even a loss of property interest. There can be no assurance that additional capital or other types of financing will be available if needed or that, if available, will be on satisfactory terms.

Foreign Exchange Rate Fluctuations

Operations in Canada are subject to foreign currency exchange fluctuations. The Company raises its funds through equity issuances which are priced in Canadian dollars, and the majority of the exploration costs of the Company are denominated in Canadian Dollars. However, the Company may suffer losses if other foreign currencies are used for its expenditures.

Property Exploration and Development Risk

The Company's properties are currently at the exploration stage of development. Exploration and development is subject to numerous risks, including, but not limited to, delays in obtaining equipment, material and services essential to developing the project in a timely manner; changes in environmental or other government regulations; currency exchange rates; labour shortages; and fluctuation in metal prices. There can be no assurance that the Company will have the financial, technical and operational resources to complete the exploration and development in accordance with current expectations or at all.

Insurance Risk

The Company's business is subject to a number of risks and hazards generally, including adverse environmental conditions, industrial accidents, labour disputes, unusual or unexpected geological conditions, ground or slope failure, cave-ins, mechanical failures, changes in the regulatory environment and natural phenomena such as inclement weather conditions, fires, floods and earthquakes. Such occurrences could result in damage, delays in mining, monetary losses and possible legal liability.

Although the Company maintains insurance to protect against certain risks in such amounts as it considers reasonable, the Company's insurance will not cover all the potential risks associated with a mining company's operations. The Company may also be unable to maintain insurance to cover these risks at economically feasible premiums. Insurance coverage may not continue to be available or may not be adequate to cover any resulting liability. Moreover, insurance against risks such as loss of title to mineral property, environmental pollution, or other hazards as a result of exploration and production is not generally available to the Company or other companies in the mining industry on acceptable terms. The Company may also become subject to liability for pollution or other hazards which may not be insured against or which the Company may elect not to insure against because of premium costs or other reasons. Losses from these events may cause the Company to incur significant costs that could have a material adverse effect on our financial performance and results of operations.

Force Majeure

The Company's projects now or in future may be adversely affected by risks outside the control of the Company, including labour unrest, civil disorder, war, subversive activities or sabotage, fires, floods, explosions or other catastrophes, epidemics or quarantine restrictions.

Forward-Looking Statements

This MD&A includes certain statements that constitute "forward-looking statements", and "forward-looking information" within the meaning of applicable securities laws ("forward-looking statements" and "forward-looking information" are collectively referred to as "forward-looking statements", unless otherwise stated). These statements appear in a number of places in this MD&A and include statements regarding our intent, or the beliefs or current expectations of our officers and directors. Such forward-looking statements involve known and unknown risks and

uncertainties that may cause our actual results, performance or achievements to be materially different from any future results, performance or achievements expressed or implied by such forward-looking statements. When used in this MD&A, words such as “believe”, “anticipate”, “estimate”, “project”, “intend”, “expect”, “may”, “will”, “plan”, “should”, “would”, “contemplate”, “possible”, “attempts”, “seeks” and similar expressions are intended to identify these forward-looking statements. Forward-looking statements may relate to the Company’s future outlook and anticipated events or results and may include statements regarding the Company’s uranium mineral interest in the Athabasca Basin and various other commodity mineral interest and the Company’s future financial position, business strategy, budgets, litigation, projected costs, financial results, taxes, plans and objectives. We have based these forward-looking statements largely on our current expectations and projections about future events and financial trends affecting the financial condition of our business. These forward-looking statements were derived utilizing numerous assumptions regarding expected growth, results of operations, performance and business prospects and opportunities that could cause our actual results to differ materially from those in the forward-looking statements. While the Company considers these assumptions to be reasonable, based on information currently available, they may prove to be incorrect. Accordingly, you are cautioned not to put undue reliance on these forward-looking statements. Forward-looking statements should not be read as a guarantee of future performance or results. To the extent any forward-looking statements constitute future-oriented financial information or financial outlooks, as those terms are defined under applicable Canadian securities laws, such statements are being provided to describe the current anticipated potential of the Company and readers are cautioned that these statements may not be appropriate for any other purpose, including investment decisions. Forward-looking statements are based on information available at the time those statements are made and/or management's good faith belief as of that time with respect to future events, and are subject to risks and uncertainties that could cause actual performance or results to differ materially from those expressed in or suggested by the forward-looking statements. To the extent any forward-looking statements constitute future-oriented financial information or financial outlooks, as those terms are defined under applicable Canadian securities laws, such statements are being provided to describe the current anticipated potential of the Company and readers are cautioned that these statements may not be appropriate for any other purpose, including investment decisions. Forward-looking statements speak only as of the date those statements are made. Except as required by applicable law, we assume no obligation to update or to publicly announce the results of any change to any forward-looking statement contained or incorporated by reference herein to reflect actual results, future events or developments, changes in assumptions or changes in other factors affecting the forward-looking statements. If we update any one or more forward-looking statements, no inference should be drawn that we will make additional updates with respect to those or other forward-looking statements. You should not place undue importance on forward-looking statements and should not rely upon these statements as of any other date. All forward-looking statements contained in this MD&A are expressly qualified in their entirety by this cautionary statement.

DIRECTORS AND OFFICERS

As at November 25, 2015, the Company had the following directors and officers:

Jonathan Armes – Director, President and CEO*
Michael Gunning – Director, Executive Chairman
Jody Dahrouge – Director
Benjamin Ainsworth – Director
Steven Khan – Director*
Warren Stanyer – Director*
Sierd Eriks – Vice President, Exploration
Jody Bellefleur – CFO
Frances Petryshen – Corporate Secretary

* Member of the Company’s Audit Committee

APPROVAL

The Board of Directors of ALX Uranium Corp. has approved the disclosure contained in this MD&A.

Additional Information

Additional information about the Company can be found at the Company’s website at www.alxuranium.com, or on www.sedar.com.
