

## ALX Resources Corp. Locates Pegmatites at the Hydra Lithium Project in Quebec

Vancouver, November 14, 2022 – ALX Resources Corp. (“ALX” or the “Company”) (TSXV: AL; FSE: 6LLN; OTC: ALXEF) is pleased to announce that it has completed a reconnaissance prospecting program at the **Hydra Lithium Project** (“Hydra”, or the “Project”) in the James Bay region of northern Quebec, Canada. Hydra consists of 306 mineral claims in four sub-projects totalling 15,837 hectares (39,134 acres), located in a world-class lithium exploration district that hosts several significant lithium-cesium-tantalum (“LCT”) type pegmatites. Hydra is 100%-owned by ALX with no applicable royalties and the newly-staked claims are in good standing until September 2025.

### Highlights of ALX’s Hydra Prospecting Program

- ALX performed site visits on all four sub-projects (Volta, Sprite, Nike and Echo) at Hydra beginning in mid-October 2022. The helicopter-assisted reconnaissance prospecting was successful in locating pegmatite bodies in several locations, despite the onset of poor weather conditions that limited the scope of the program;
- The Volta and Sprite projects were interpreted by our experienced field team to host the most prospective geology visited during the program. Pegmatite rocks sampled on these two projects may be lithium-bearing pending laboratory analyses;
- Samples were submitted to SGS Canada Inc. for multi-element analysis. Results are expected in December 2022 and will be released following their receipt, compilation and interpretation.

## ALX's Hydra Lithium Project claims and infrastructure in the James Bay Region, Quebec

### 2022-2023 Exploration Plans

Following receipt of the results of the 2022 prospecting, ALX is planning a high-resolution magnetic and radiometric survey in early 2023 to provide additional geophysical information regarding structure and extent of pegmatite bodies. In the 2023 field season, follow-up geochemical and geological surveys are planned across the highest-priority areas in order to map out lithium-bearing pegmatite dykes and sills and optimize potential drill targets.

### About Hydra

Hydra consists of four sub-projects totaling 15,837 hectares (39,134 acres) known as Volta (4,806 ha.), Echo (5,537 ha.), Nike (2,056 ha.), and Sprite (3,438 ha.), all located within a fertile mineral exploration district that is known to host the following existing lithium deposits:

- James Bay Lithium – (Indicated Mineral Resource: 40.33 million tonnes grading 1.4% Li<sub>2</sub>O), owned by Allkem Limited;<sup>1</sup>
- Rose - (Probable: 26.3 million tonnes grading 0.87% Li<sub>2</sub>O and 138 ppm Ta<sub>2</sub>O<sub>5</sub>), owned by Critical Elements Lithium Corporation;<sup>2</sup>
- Whabouchi - (Measured + Indicated “in Pit” Mineral Resource: 37.356 million tonnes grading 1.48% Li<sub>2</sub>O), owned by Livent Corporation and Investissement Québec.<sup>3</sup>

3 NI 43-101 Technical Report on the Whabouchi Lithium Mine and Shawnigan Electrochemical Plant, by Met-Chem et al, November 7, 2018

ALX believes that Hydra is underexplored for LCT pegmatites because of the high prospectivity of the region, as suggested by the Corvette Lithium Deposit, and because the historical focus of exploration in the James Bay Region has been on gold and base metals. The James Bay Hydroelectric Project (total investment by Hydro-Québec is estimated at greater than CAD\$16 billion since the early 1970s) has created infrastructure for mineral exploration in the form of several all-weather roads, including the Trans-Taiga Road. A working airstrip is located central to Hydra.

Exploration success has been realized by several junior exploration companies in the James Bay region where ALX has staked the Hydra claims, most notably by Patriot Battery Metals Inc., which has reported highly-significant lithium drill intersections in 2022 from their flagship Corvette Lithium Property.

### **National Instrument 43-101 Disclosure**

The technical information in this news release has been reviewed and approved by John Charlton, P.Geo., a consultant to ALX, who is a Qualified Person in accordance with the Canadian regulatory requirements set out in National Instrument 43-101.

Mineral resource information from lithium deposits in the James Bay region quoted in this news release were taken directly from publicly available disclosure. Management cautions that historical results were collected and reported by operators unrelated to ALX and have not been verified nor confirmed by its Qualified Person but create a scientific basis for ongoing work in the Hydra project area. Management further cautions that historical results or discoveries on adjacent or nearby mineral properties are not necessarily indicative of the results that may be achieved on ALX’s mineral properties.

### **About ALX**

ALX is based in Vancouver, BC, Canada and its common shares are listed on the TSX Venture Exchange under the symbol “AL”, on the Frankfurt Stock Exchange under the symbol “6LLN” and in the United States OTC market under the symbol “ALXEF”.

ALX’s mandate is to provide shareholders with multiple opportunities for discovery by exploring a portfolio of prospective mineral properties, which include uranium, lithium, nickel-copper-cobalt and gold projects. The Company uses the latest exploration technologies and holds interests in over 220,000 hectares of prospective lands in Saskatchewan, a stable Canadian jurisdiction that hosts the highest-grade uranium mines in the world, a producing gold mine, and production from base metals mines, both current and historical.

ALX’s uranium holdings in northern Saskatchewan include 100% interests in the **Gibbons Creek Uranium Project**, the **Sabre Uranium Project** and the **Javelin and McKenzie Lake Uranium Projects**, a 40% interest in the **Black Lake Uranium Project** (a joint venture with Uranium Energy Corporation and Orano Canada Inc.), and a 20% interest in the **Hook-Carter Uranium Project**, located within the

uranium-rich Patterson Lake Corridor, with Denison Mines Corp. (80% interest) as operator of exploration since 2016.

ALX owns 100% interests in four lithium exploration properties staked in September 2022 collectively known as the **Hydra Lithium Project**, located in the James Bay region of northern Quebec, Canada.

ALX also owns 100% interests in the **Firebird Nickel Project** (now under option to Rio Tinto Exploration Canada Inc., who can earn up to an 80% interest), the **Flying Vee Nickel/Gold** and **Sceptre Gold** projects, and can earn up to an 80% interest in the **Alligator Lake Gold Project**, all located in northern Saskatchewan, Canada. ALX owns, or can earn, up to 100% interests in the **Electra Nickel Project** and the **Cannon Copper Project** located in historic mining districts of Ontario, Canada, the **Vixen Gold Project** (now under option to First Mining Gold Corp., who can earn up to a 100% interest in two stages), and in the **Draco VMS Project** in Norway.

#### **FORWARD-LOOKING STATEMENTS**

*Statements in this document which are not purely historical are forward-looking statements, including any statements regarding beliefs, plans, expectations or intentions regarding the future. Forward-looking statements in this news release include: ALX's 2022-2023 exploration plans at the Hydra Lithium Project, and ALX's ability to continue to expend funds at that project. It is important to note that the Company's actual business outcomes and exploration results could differ materially from those in such forward-looking statements. Risks and uncertainties include that ALX may not be able to fully finance exploration on our exploration projects, including drilling; our initial findings at our exploration projects may prove to be unworthy of further expenditures; commodity prices may not support further exploration expenditures; exploration programs may be delayed or changed due to any delays experienced in consultation and engagement activities with First Nations and Metis communities and the results of such consultations; and economic, competitive, governmental, societal, public health, environmental and technological factors may affect the Company's operations, markets, products and share price. Even if we explore and develop our projects, and even if uranium, lithium, nickel, copper, gold or other metals or minerals are discovered in quantity, ALX's projects may not be commercially viable. Additional risk factors are discussed in the Company's Management Discussion and Analysis for the Six Months Ended June 30, 2022, which is available under the Company's SEDAR profile at [www.sedar.com](http://www.sedar.com). Except as required by law, we will not update these forward-looking statement risk factors.*
